## IMPORTANT NOTICE.

Our sole aim in publishing this Guide is that it may be useful to our clients ; and to prevent any suspicion of partiality, we accept no hotel advertisements whatever.

Our information is therefore entirely independent. We are aware that every good hotel has not been mentioned, but we have done all in our power to guarantee that those hotels mentioned are in every way worthy. We have added a small number of hotels holding the appointment of the Royal Automobile Club, as well as a few others which we can recommend, but concerning which we have been unable to obtain detailed particulars.

Nevertheless, in spite of every precaution, it is almost impossible to avoid some inaccuracies. We should be extremely grateful if motorists would point out any errors which may occur, and also inform us of hotels making charges different from those indicated in the Guide. All such information and complaints will be examined with the greatest care, and for the common good.

We would ask holders of the Michelin Guide to state plainly, when visiting hotels, that they have been recommended by the Michelin Guide. In this way customers will receive proper attention, and any complaints which may be brought to our notice can be more satisfactorily dealt with.

## GOLF LINKS. RACECOURSES.

Knowing that a very great number of motorists are also devotees of golf, we have thought it interesting to give indications of the many links which exist throughout the British Isles. In the general information for towns possessing golf links will be found a small illustration representing two crossed golf clubs, a ball, the number of holes on the course, and letters and figures denoting direction and distance of the links from the town.

We have also given information concerning the chief race-meetings. When the course is near a town we have indicated it by an illustration of a horse and jockey, the dates of meetings, and the direction and distance from the town. If the course is situated at some distance from a town, it has been given a place in the alphabetical list, and *its* position indicated with reference to the nearest large town (Ex. Goodwood ; N. Chichester 5 ; *i.e.* Goodwood is situated 5 miles north of Chichester).

# METHODS ADOPTED IN DRAWING UP THE ITINERARIES.

(See Conventional Signs, p. 3.)

---

**Among the 1880 towns which compose the Alphabetical List, we have chosen, according to their *general importance* and their *situation* at the junction of several main roads, a certain number of towns which we have joined together in every direction by *detailed itineraries*.**

We thus obtain a network of through routes and main roads. In order to join up the other towns with this network, we have given the distance from each of them to the nearest, in every direction, of the towns composing the network.

This method gives the following great advantage :—*In whatever town of the Guide the reader may find himself, or to whatever point he may wish to travel, he is always certain of being able to find, immediately, precise indications upon the itinerary to be followed.*

In describing the itineraries which radiate from a town, we always commence by those leading in a northerly direction, afterwards taking in order those going eastward, southward, and westward.

In the principal towns (*i.e.* those with plans) each exit by which an important road leaves the town is indicated by **E. I, E. II,** etc., which numbers are also placed on the plans. All plans are drawn north and south.

All distances given in the itineraries are calculated from the centre of the town.

(See example, p. 8.)

# HOW TO USE THE GUIDE.

## BEFORE STARTING.

### Choice of Itinerary.

1. **Consult the Key Map, pp. 2-3 of the Atlas.**
Here will be found the main lines of the route to be followed, together with the names of the principal towns on the road, and the numbers of the maps on which they are to be found.

2. **Refer to these towns in the Alphabetical List, and to the maps in the Atlas of which the numbers have been noted.**

Thus will be easily found, full information enabling the itinerary to be definitely mapped out according to taste (rapidity, picturesqueness, etc.).

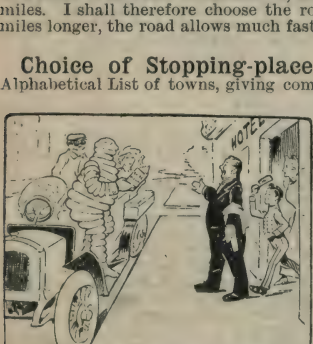
**Example :—I wish to travel from York to Kendal.**
On the Key Map (pp. 2-3 of the Atlas), I am referred to Maps 16 and 17, and there I see two roads joining these two towns, the first *viâ* Tadcaster and Skipton, the second by Ripon, Aysgarth, and Sedbergh. I shall find these two routes in detail in the text of the above-mentioned towns.

To obtain the total distance I find at York : Tadcaster 9 ; at Skipton : Tadcaster 35 and Kendal 46 ; a total of 90 miles. For the second route I find at York : Ripon 24 ; at Ripon : Kendal 63 ; a total of 87 miles.

In the text of **E. V,** the road from York to Tadcaster is shown as mediocre ; at Skipton I find that the road to Tadcaster is good, and the road to Kendal very good, but undulating, and at 38 miles distant from Skipton I shall descend a hill having a 1 in 10 slope. In the text of **E. VI,** the road from York to Ripon is shown as good, but undulating, and after travelling 17 miles I shall climb a 1 in 20 hill and descend again ; at Ripon I find that the road to Sedbergh is mediocre and hilly, and that I shall have to descend a 1 in 12 hill at 28 miles. The road from Sedbergh to Kendal is bad and mountainous, and has a steep desc. of 1 in 9 at 62 miles. I shall therefore choose the route *viâ* Skipton, for, although 2 miles longer, the road allows much faster travelling than that *viâ* Ripon.

### Choice of Stopping-place.

—The Michelin Guide with its Alphabetical List of towns, giving complete information upon repairers and hotels, their prices and installation, will be of great assistance in choosing a stopping-place.



A **good hotel,** answering the requirements of tourists, must exist in the town where it is proposed to pass the night. Wherever possible, an hotel possessing a well-appointed **garage** should be chosen, where the car may be safely housed, and, if necessary, cleaned and repaired. A repairer in the town will afford a good substitute if no garage is available at the hotel.

In any case, a town possessing a **Michelin Stockist** should be chosen whenever possible, in order

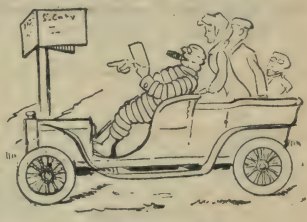
that change or spare tyres and accessories may be easily obtained if needed.

The morning stopping-place, that is to say lunch-time, is also a question to be studied. A town of some importance, or a picturesque village with a hotel of the 6th class, might be chosen.

## ON THE ROAD.

**The Route.**—Having definitely mapped out an itinerary, the next thing to do is to follow it out on the road. The best method is to use a large-scale map.

Many tourists, however, do not like using a map, finding impracticable the large sheets of paper which are caught by every gust of wind, and which must be folded and unfolded whilst *en route*. For such, the Michelin Guide, with its detailed itineraries and numerous indications upon the road to follow, will be of the utmost service—distances, names of towns, villages and localities on the road, which serve as landmarks denoting that the direction followed is the right one.



Our map (Scale 1 : 1,000,000), placed in the middle of the Guide and divided into sections, is on too small a scale to follow out easily the road without the help of another map. Nevertheless, if the main roads are kept to, the map will be found very useful. Moreover, it possesses a certain advantage over other maps in that it indicates the distances (to the nearest mile) between towns and branch roads. These figures will be of great value in making rapid calculations, such as the distance to be travelled before the next large town is reached.

**Example.**—I wish to travel from York to Kendal. Kendal being north-west of York, I shall find my road among the last itineraries leaving York. I find the road to Tadcaster at **E. V.** I therefore leave the town by **E. V,** and follow the road to Tadcaster, 9 miles. At 6 miles I pass through Streethouses, showing me that I am on the right road. Just before reaching Tadcaster, I turn up that town in the Alphabetical List, and find the distance to Otley, and continue in the same way to Kendal.

**In Towns.**—When a town presents serious difficulties in the matter of passing through it, we have produced plans, in two colours for very large towns and in black-outline for the others. All plans are drawn north and south. The roads or streets to be followed when crossing or visiting the town are shown in three different widths according to their importance. The names of streets are printed on the two-coloured plans, whilst on the others the numbers corresponding to the list given in the margin enable each road to be easily found; places of interest or places serving as guides are each indicated by a special sign.

**Example.**—A tourist travelling from Hull to Newcastle, *viâ* York, will pass through York by St. Lawrence St., Walmgate, Foss Bridge, Fossgate, Colliergate, Low Petergate, High Petergate, and Bootham (Nos. 14, 13, 12, 11, 10, 5, 1, and 31 on the plan) if he wishes to pass straight through the town. If, however, without actually stopping he wishes to gain some idea of the town, he will make the tour indicated by figures 14, 20, 19, 18, 17, 16, 35, 24, 23, 1, and 31 (St. Lawrence St., Castle Mills Bridge, Tower St., Clifford St., Spurrier St., Coney St., Lendal St., Museum St., Duncombe Place, High Petergate, and Bootham), thus passing by the City Walls, York Castle, Michelin Stockist's premises, the Post Office, the Theatre, the Minster, and the Museum.

If he wishes to visit the town in detail, he will easily find the streets leading to the places of interest mentioned in the general information; St. Mary's Abbey, the Minster, York Castle, and the City Walls.

## CURIOSITIES—EXCURSIONS.

The **curiosities** or places of interest are mentioned in the *general information* for each town. Those situated in the environs of a town are indicated by their distance and direction from the town.

**Picturesque** is indicated in the text by the abbreviations (*pict.*) and (*v. pict.*) which qualify the road in general described immediately before.

Districts which contain a more than usual number of interesting places and picturesque roads are described in the excursions. These excursions are given either for tourists staying in a town, who may wish to make one or two day excursions in the neighbourhood, or for tourists who, whilst travelling from one town to another, may wish to prolong their journey in order to see everything of interest in the country.

We have only given the most interesting excursions; tourists desiring to visit thoroughly any particular district should apply to our Touring Office, 81, Fulham Road, Chelsea, London, S.W.

# PART I.

# MICHELIN TYRES.

## THE STOCKISTS,

## THEIR STOCK, AND SPECIAL SIGNS.

Any **Michelin Stockist can Supply** all ordinary sizes of **Inner tubes** and plain or non-skid **covers.**

The MICHELIN STOCK comprises square tread and non-skid covers and inner tubes, in all ordinary sizes, and the latest accessories.

The towns in which Michelin Stockists can be found are indicated :

1. *In the Guide :*

(*a*) *In the descriptions of towns* (see General Information) by the sign ⓜ placed directly after the name of the town.

(*b*) *In the descriptions of towns* (see Road Guide Section) by the words MICHELIN STOCKIST followed by the sign AIR when the Stockist can supply our Air Cylinders.

(*c*) *In the descriptions of Itineraries* by the sign ⓜ.

2. *On the roads,* by large signs placed in prominent positions near the towns. Below the words "MICHELIN

FIG. 1.

TYRES" *the name and address of the Stockist* appear in large characters.

*Important Note:*—Owing to repeated objections to these road signs on the ground that the great number of advertisements exhibited in the country constitute an eyesore, the Michelin Tyre Co., Ltd., have decided to remove all their signs during the course of 1913.

FIG. 2.

3. *In the towns,* by a double-faced Round Sign carrying the words

"STOCK MICHELIN 1913."

This sign hangs above the entrance to the Stockist's premises.

# THE MICHELIN AIR CYLINDER.

**Any stockist whose name, in the Guide, is accompanied by the sign AIR can supply Michelin Air Cylinders. A fully charged cylinder can be had in exchange for an empty one.**

**The following is a list of stockists (correct to date of publication) who hold an assortment of our Air Cylinders, and who can supply them at all times.**

## CONDITIONS OF SALE.

We would remind our clients that Rubber will not last an indefinite time, like steel, for example, but, on the contrary, that its destruction is inevitable sooner or later, and depends upon causes external and internal as yet very little understood. Our efforts are devoted to supplying the best material possible, and we seek also to avoid all defects in the construction of the Tyre. The great strain put upon the Tyre and the hard work imposed by many drivers tend further to shorten its existence; the rubber, like the canvas supporting it, being constantly exposed to a strain approaching breaking point.

Accordingly, it will be easily understood how impossible it is for us to give any guarantee whatever, and we are thus compelled to warn our clients that we decline all warranty or responsibility attributable to defects, whether latent or patent, that may exist in our products, or for any accidents to persons or things, or from anything which may arise therefrom.

The diameter and section sizes by which our tyres are designated, are recognized in the Motor Industry as being merely approximate denominations, used to facilitate ordering, but, as a matter of fact, they are not mathematically exact, owing to the nature of the materials used in the construction of Pneumatic Tyres, and, moreover, by reason of the fact, that Pneumatic Tyres expand somewhat in use.

**N.B.—All Prices are strictly Net and for Cash Payments.**

When delivery has been accepted, it must be clearly understood that the Buyer agrees to the above conditions.

**Prices are always subject to alteration without notice.**

## ORDERS.

For the purpose of reducing to a minimum all possibility of error, either in the transmission of orders or in their execution, we have given a Code name to every article in our Price List. Moreover, in the case of Telegraphic Orders, our Customers thus effect an important saving in the cost of transmission. For the same purpose, we have given the following Code names to the different ways of forwarding goods :—

**Valerius**—Send by Post.
**Velitor**—Send by Parcel Post.
**Velocitas**—Send by Registered Post.
**Vespasia**—Send by Passenger Train, to be called for at Station.
**Vindex**—Send by Passenger Train.
**Vistula**—Send by Goods Train, to be called for at Station.
**Volta**—Send by Goods Train.
**Viator**—Send by Express Messenger (for London only).
**Voluptas**—Send by Carrier.

We therefore beg our Customers, when ordering per Post or Telegraph—

1. To specify **Mode of Forwarding,** mentioning route, and
2. To denote each article by the corresponding **Code Word.**

It is sufficient to write—"Vindex two Halitus three Frontalia" (numbers should be written in full).

**Telegraph and Telephone Orders.**—To protect our clients and ourselves against fraud we are compelled to decline to deliver goods ordered by telegram or telephone to the address of any person or firm unknown to us, unless covered by telegraphic remittance.

## FORWARDING.

*Goods are always despatched carriage forward at Consignee's risk*, and per PASSENGER TRAIN unless otherwise stipulated. If goods sustain damage when sent by *Passenger Train*, Consignee should claim from the Railway Co. In the event of consignments being sent per *Goods Train* they are carried by the Railway Co. at OWNER'S (i.e. *Consignee's*) risk; and the Railway Co. will not accept any liability for damage sustained in transit.

**Packing Cases, Sacks, etc.,** are always debited, but the full amount will be credited if returned in good condition, carriage paid, within 30 days from date of invoice.

**Inflammable Goods** (*i.e.* **Solution, Tyre Paint, Mastic**).—Owing to the inflammable nature of these preparations, we are prohibited from consigning them per *Post or Passenger Train*. The Railway Companies will only carry them *per Goods Train at a Special Minimum Rate of* 2/6, up to, and not exceeding 10 lbs. per consignment.

**Non-inflammable Solution and Tyre Paint.**—We are now manufacturing non-inflammable solution and tyre-paint, which can be sent either by Post or Goods Train at the ordinary rates. The Railway Companies, however, refuse to carry it by Passenger Train.

**Repairs and Replacements.**—*Carriage must be prepaid on all goods, repairs, etc., sent to the Company.* The name and address of the sender should be written on a label securely fixed to the parcel. As an extra precaution, another label should be placed inside; otherwise the Company declines all responsibility should any parcels go astray or be delayed.

**Warning.**—*Customers are warned against buying our tyres with the numbers, either wholly or partially, erased, as they may be of* OLD MANUFACTURE. *We decline all responsibility for such tyres, and will in no case undertake their repair. All genuinely new covers are properly wrapped, and sealed with a Metal Seal.*

# HOW TO WEIGH A CAR.

**The vehicle must be weighed with all ordinary luggage, accessories, etc., aboard; and with all seats occupied, and all water and petrol tanks full.** That is to say, it must be weighed while supporting the greatest weight that it may be required, at any time, to carry.

Proceed as follows:

1. Weigh the whole car on a platform-scale, *i.e.* any coal or grain merchant's scale (Fig. 3).—2. Weigh the back of the car; *i.e.* place it so

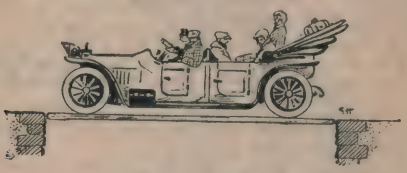

FIG. 3.—Weight of whole car.

that its back wheels shall be on the platform while its front wheels are on the ground (Fig. 4).—3. Weigh the front of the car; *i.e.* place it so

FIG. 4.—Weight of back.

that its front wheels shall be on the platform while its back wheels are on the ground (Fig. 5).

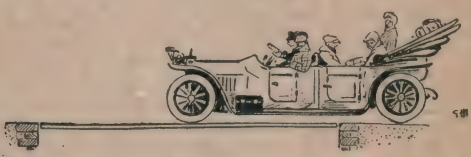

FIG. 5.—Weight of front.

If the weighing is done carefully, the weight of the whole car should not exceed the sum of front and back weights by more than 20 lbs.

When weighing the front and the back of the car separately, see that the wheels, in each case, are placed as *close to the centre* of the platform as possible. If the platform is too long, it may not be too wide to permit the wheels to occupy a position close to its centre. In such a case then, the scale, if suitably situated, should be approached, by the car, from the side.

**See on page 72 the form to be filled up giving details of your Car.**

# HOW TO CHOOSE YOUR TYRES.

When buying tyres, the motorist should choose those which are suitable to the weight of his car and the power of the engine.

He must know exactly the weight each axle carries, and use corresponding tyres as shown in the table below.

The use of too light a tyre, far from being an economy, is the cause of rapid wear, endless worry, and unnecessary expense.

The motorist should use exactly the same sized tyres for each wheel, so that: (1) he can wear out tyres on the front wheels which have become too weak for the back; (2) he does not have to carry a spare tyre for each wheel.

This latter advantage becomes of vast importance in the case of detachable rims.

# TYRE TABLE.

**When choosing your tyres, take into consideration the weight and the HP of your car.**

*If the weight and HP give two different sizes of tyres in this table, choose the larger size.*

## SINGLE TYRES.

| Model. | Tyre Section. | Maximum Weight per axle — Lbs. |
|---|---|---|
| VOITURETTE | Light voiturette model | 1100 |

## "JUMELÉ" TWIN TYRES.

With a maximum weight per axle of—

| | | |
|---|---|---|
| 2640 to 3500 lbs. | use | 105 twin tyres. |
| 3500 to 4400 lbs. | use | 120 ,, ,, |
| 4400 to 5250 lbs. | use | 135 ,, ,, |

*See:* How to weigh a car, *p. 30;* How to inflate tyres, *p. 32;* the form to be filled up giving details of the car, *p. 72.*

# INFLATION TABLE.

## VOITURETTE MODEL.

| SECTION of Tyre. | MAXIMUM weight which tyre can carry. | WHEN tyre carries. | PRESSURE per square inch. |
|---|---|---|---|
| | | lbs. | lbs. |
| "Voiturette Legere" | 550 lbs. | 275 to 385 | 42 |
| | | 385 to 500 | 60 |
| 85 Reinforced | 440 lbs. | 220 to 330 | 42 |
| | | 330 to 440 | 50 |
| 85 Extra strong | 660 lbs. | 330 to 440 | 42 |
| | | 440 to 550 | 60 |

## CAR MODEL.

| | | lbs. | lbs. |
|---|---|---|---|
| 90 | 550 to 880 lbs. | 550 | 42 |
| | | 660 | 50 |
| | | 770 | 60 |
| | | 880 | 65 |
| 105 | 660 to 990 lbs. | 660 | 42 |
| | | 880 | 60 |
| | | 990 | 70 |
| 120 | 880 to 1320 lbs. | 880 | 42 |
| | | 1100 | 60 |
| | | 1320 | 70 |
| 135 | 1100 to 1430 lbs. | 1100 | 42 |
| | | 1320 | 60 |
| | | 1430 | 70 |

N.B.—Do not inflate below 42 lbs. or above 70 lbs. If the weight to be supported by the tyre requires a higher pressure than 70 lbs., choose the next size tyre; and after the 135, use the Twin Tyres.

## TWIN TYRES ("JUMELÉS.")

| SECTION of Tyre. | WEIGHT CARRIED by axle. | PRESSURE per square inch |
|---|---|---|
| 105 | 2650 lbs. | 42 lbs. |
| | 3090 lbs. | 50 lbs. |
| | 3500 lbs. | 60 lbs. |
| 120 | 3500 lbs. | 42 lbs. |
| | 3975 lbs. | 50 lbs. |
| | 4400 lbs. | 60 lbs. |
| 135 | 4400 lbs. | 42 lbs. |
| | 4860 lbs. | 50 lbs. |
| | 5250 lbs. | 60 lbs. |

N.B.—For Twin Tyres, on vertical wheels (live-axle drive), it is advisable to inflate the outer tyre to a greater pressure than the inner tyre. For example, if the weight of the car necessitates a pressure of 50 lbs., inflate to 42 lbs. for the inner tyre, and to 60 lbs. for the outer tyre.

*The motorist who will take the trouble to look after his tyres as he should will effect a considerable saving.*

*These directions will enable him to do so.*

*But one does not learn how to fit tyres by reading only, and looking at figures. It is necessary to practice fitting tyres in the way the instructions and figures indicate.*

*It is, therefore, not on the road, at the moment when they are needed, that our clients should read these directions, but in the garage, with the parts to hand, and by executing as far as possible the operations described.*

*Where security bolts are used, we would refer our readers to the instructions for fitting appearing in former editions of our Guide.*

# THE MICHELIN AIR CYLINDER.

The Cylinder contains air at 1,800 lbs. pressure, *not* carbonic acid gas. Attached to it are two separate flexible tubes and a pressure gauge.

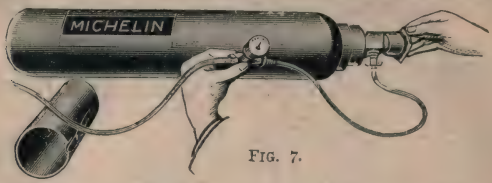

FIG. 7.

## Inflation.

Fix the tubes and pressure gauge on the cylinder as shown in the figure.

Release the plug of the valve from its seating with the pin of the connection, and screw the connection on to the valve.

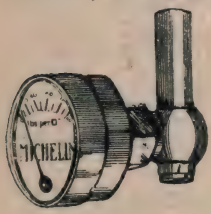

FIG. 8.

Open fully the valve of the cylinder (the needle of the pressure gauge should indicate a pressure of about 30 lbs.); let the pressure rise a little higher than that indicated in the table on p. 32.

Shut off the air, unscrew the connections, and verify the pressure in the tyre with the pressure tester (Fig. 8).

If the pressure is too great, let a little air escape by pressing with the pin of the connection on the needle of the valve plug.

N.B.—*An empty Air Cylinder may be exchanged for a full one at all Stockists mentioned in the Michelin Guide with the sign :* AIR

## HINTS ON INFLATION.

It is absolutely essential that tyres should be correctly inflated in accordance with the table given on p. 32.

An excess of pressure strains the canvas of the cover ; the tyre is less resilent and therefore less comfortable. The tyre will no longer absorb an obstacle, but will bump and be cut.

### How to use the Pressure Tester.

*Take off the hood and cap of the valve, and cover the end of it with the tubular portion of the pressure tester.*

*Press heavily and in a straight line with the valve (the air should not escape). The needle on the face of the tester will then register the pressure in the tyre.*

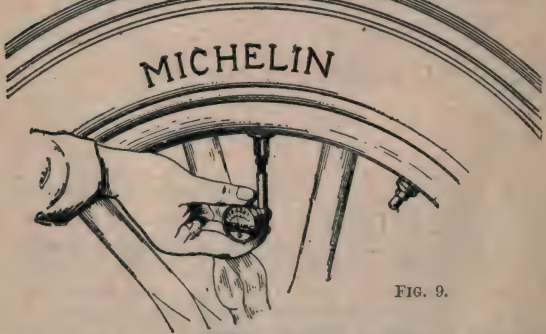

FIG. 9.

A tyre which is under-inflated undergoes considerable deformation which makes it very hot, and when passing over bumpy ground the shocks received pinch the tyre between the rim and the road.

*It is therefore necessary frequently to verify the pressure in tyres with our Pressure Tester.*

# THE MICHELIN BOLT-VALVE.

The **Bolt-Valve** consists of a *security plate* P shaped like a boat which is fixed on the body of the valve of an inner tube by a nut ; this plate, when drawn down on to the beads by the special valve hood nut (Fig. 10), keeps them in place.

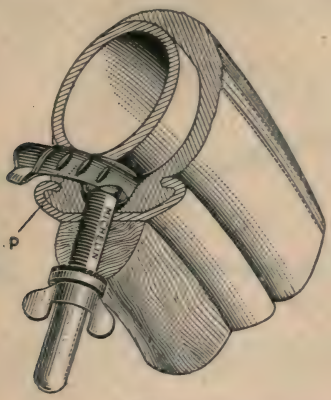

FIG. 10.

## Advantages of the Bolt-Valve.

The valve is thus transformed into a security bolt which is quite efficient and allows the suppression of all the security bolts.

The inner tube and the cover can both be fitted on the rim at the same time, and can be removed in the same way, a fact which greatly simplifies the fitting and detaching of tyres.

It obviates the difficulty of manipulating security bolts.

It prevents all chances of nipping.

A tyre is very quickly and easily fitted by means of our **new levers for Michelin Tyres fitted with the Bolt-Valve,** the use of which is explained further on.

## Adaptation of Michelin Bolt-Valve to a tube fitted with ordinary valve.

Any motorist can convert an ordinary valve into bolt-valve in a few minutes and at a very small cost.

The parts required are : a special security plate, an additional nut I, and a winged hood, according to the type of rim used.

When making the conversion it is first of all necessary to remove all parts of the valve with the exception of the nut I ; next fit the security plate in such a manner that the ridged surface is away from the tube ; then fit the additional nut I, securing same firmly with the aid of the box spanner supplied for the purpose.

The tube is then ready for fitting ; this operation being completed, the winged valve hood should be tightly screwed by hand against the surface of the rim.

When bolt valves are used with detachable rims or twin wheels a rubber and metal washer " Amoronto " must be used in addition to the parts mentioned above. This is placed on the valve stem, following the additional nut I, with the metal crown resting upon the latter.

---

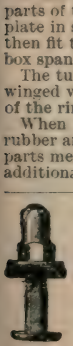

FIG. 11.

Dummy bolts should be used to plug the existing security bolt holes in the rims. These are made in three types, Fig. 11 for artillery wheels, Fig. 12 for detachable rims, and short bolts for wire wheels.

FIG. 12.

# THE FITTING LEVERS.

**Special Note.**—*The* new fitting levers *can only be used with the new comformed covers and with all non-skid covers. The old model levers must be used with other covers.*

*We are not yet in a position to supply our new pattern levers, but we anticipate that they will be on the market during May. Orders may now be given, however, and these will be dealt with in strict rotation.*

The accessories used in the **new fitting process** for Michelin Tyres with bolt-valve are : two "S" levers (Fusil and Forum) and a hook lever (Fez) (Figs. 13, 14, 15).

FIG. 13.

FIG. 14.

FIG. 15.

The fitting is done with one of the two "S" levers and a hook lever.
The detaching is done with **the two "S" levers.**
The fitting of tyres with bolt-valve may also be done with the **spur**

FIG. 16.

FIG. 17.

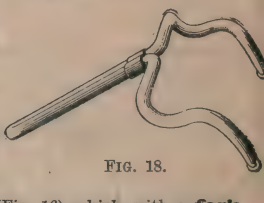

FIG. 18.

**lever** (Fig. 17) and the **elbow lever** (Fig. 16), which, with a **fork lever** (Fig. 18) and a wooden **dummy valve,** are used for fitting tyres with security bolts.

---

We make three models of winged valve-hoods; one for artillery wheels (Fig. 19), one for detachable rims and twin-wheel rims (Fig. 20), and a third for wire wheels (Fig. 21).

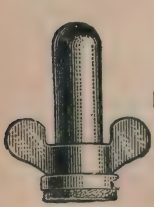

FIG. 19.

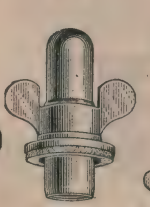

FIG. 20.

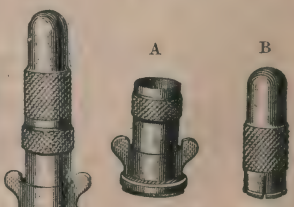

FIG. 21.

This last valve-hood is in two parts A and B, which fit into each other.

When a tyre is to be inflated or the air-pressure verified it is unnecessary to unscrew the entire valve-hood, which is difficult between the spokes of wire-wheels, but simply to pull off part B (Fig. 21).

# FITTING AND DETACHING MICHELIN TYRES,
## WITH THE BOLT-VALVE.

## FITTING.

It is necessary, first of all, *to prepare the tyre ;* that is to say :

**Partly inflate the tube.**

FIG. 22.

Our new fitting methods, whilst avoiding all risk of pinching the tube, do not require that the partial inflation should be so great as with the old methods. The fitting will be facilitated if the tube is partially inflated to the requisite pressure in the following way :

Inflate the tube slightly, then let it hang on the left hand (Fig 22), half unscrew part C of the valve to allow any surplus air to escape until the jet of air can no longer be felt on the hand, then screw up tightly the parts C and D.

**Chalk the tube.**

Rub the tube over with a rag dipped in French chalk, then shake it to remove any excess of chalk.

**Place the tube inside the cover,** commencing with the valve, which should be fitted exactly in the valve-slits in the beads.

**Place the tyre on the rim.**

Take it in both hands, the works number towards you, and place the valve in the hole in the rim (Fig. 23). Then draw away the tyre and let it fall back again, so that the inner bead is well fitted in the clinch of the rim behind the valve. Make sure that the bolt-valve plate is inside the cover.

*It is at this point that the fitting proper commences, and it entails three essential movements.*

FIG. 23.

**1. Fix the tyre on the rim to the right of the valve with the hooked lever.**

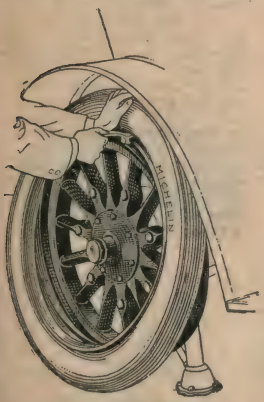

FIG. 24.

With the right hand just above the third spoke and to the right of the valve, push the tyre towards the car, until the outer bead falls into clinch of the rim ; hold it in position with the left hand whilst the hooked lever is placed in position (Fig. 24).

FIG. 25.

*The hooked lever is easily placed by pressing with its nose on the bead and raising up the handle so that the hook is held in the clinch of the rim* (Fig. 25).

**2. Fit the two beads at once on the rim to the left of the valve with one of the levers (the large one for preference).**

Standing to the left of the wheel, lever the outer bead to the left of the valve on to the rim, and hold it there with the left hand.

Then use the lever freely at intervals of 5 inches, making both beads pass on to the rim, until the outer bead is well fitted into the clinch about halfway round.

*The lever should be placed under the tyre with the tip hooked to the rim and the tyre resting in the curve of the lever* (Fig. 26). *Slip the lever along the rim until it is wedged between the rim and the tyre* (Fig. 26), *then push it down until it is in line with the spokes.*

Each time leverage is exerted, hold the tyre in position on the rim with the left hand (Fig. 26) whilst withdrawing the lever and placing it again 5 inches further round.

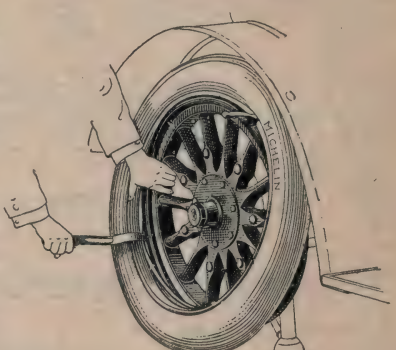

FIG. 26.

*With 90 tyres the left hand must press on the top of the tyre instead of on the side.*

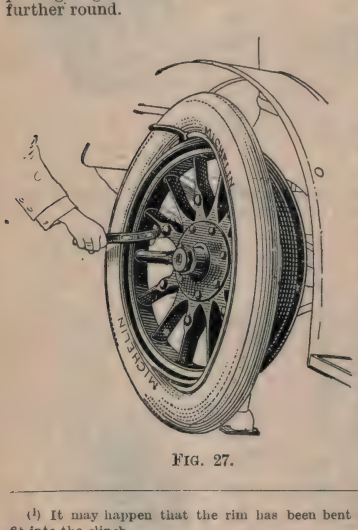

FIG. 27.

**3. Push up the valve.**

When the cover is well on the rim to the left of the valve, *push up the valve with the lever* (Fig. 27) to allow the outer bead to pass under the bolt-valve plate and fit into the clinch.

See that the inner bead has not slipped out. If necessary, push it back with the hand.

The tyre is now firmly caught on the rim.

It is then only necessary to **withdraw the hook lever** by pulling it sideways, and to **finish the fitting by levering on to the rim the remainder of the tyre, a very little at a time.** (1)

---

(1) It may happen that the rim has been bent by a shock and the bead will not fit into the clinch.

If this is so, take a piece of wood and a hammer, place one end of the piece of wood vertically on the bead, and knock with the hammer to make the bead fit.

If this operation is unsuccessful, put on a gaiter and a rubber protector, and inflate the tyre to 15 lbs. (p. 63).

Lace up the gaiter and drive slowly to the nearest garage, where the rim can be straightened.

## DETACHING

*In the same way that the cover and tube are fitted simultaneously by making both beads slip on to the rim together, so the tyre is detached, both cover and tube in one operation, by making the two beads leave the rim together.*

Proceed as follows :—

Having half unscrewed the valve-hood, raise it up with a lever, and release the bolt-valve plate (same movement as in Fig. 27). Then take off the valve-hood, and release the outer bead by pushing it inwards with a lever all round.

Turn the wheel until the valve is at the bottom.

**Detach a portion of the outer bead opposite the valve.**

Push back the bead opposite the valve with the *small lever* (holding it with the side marked *Forum* underneath, Fig. 28, A), thus allowing the turned back end of the *large lever* (the side marked *Montage* uppermost, Fig. 28, B) to be pushed under the bead.

Raise the bead with the *large lever*, and slip in the space so made the straight end of the *small lever* (the side marked *Forum* being uppermost) until its turned back end rests upon the inner bead (Fig. 29).

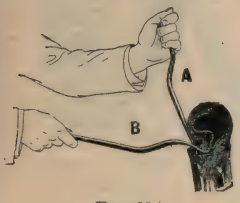

FIG. 28.

FIG. 29.

The *small lever* will then be horizontal (Fig. 30), and its turned back end holds it firmly on the wheel. (1)

FIG. 30.—POSITION OF THE LITTLE LEVER UNDER THE OUTER BEAD.

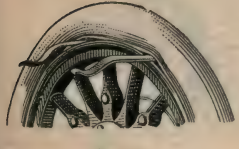

FIG. 31.

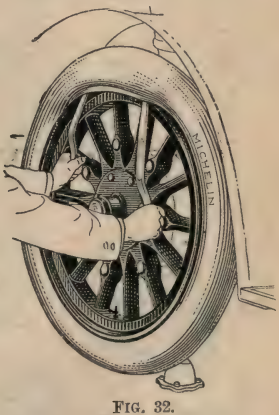

FIG. 32.

It may therefore be left, and the *larger lever* taken in both hands and inserted under the bead 8 or 10 inches from the first (Fig. 31).

Press down the two levers (Fig. 32), at the same time widening the distance between the hands.

---

(1) If it should happen that the lever passes under the inner bead instead of resting on it, it will be impossible to push it down. It will be necessary to draw it out and replace it correctly.

The bead will now leave the rim. (1)
Take out another 8 inches with the large lever.
Then, *detach the two beads together.*
To do this, turn that part of the tyre already detached from the rim clear away from the mudguard.

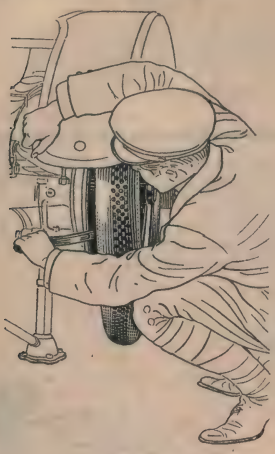

FIG. 33.

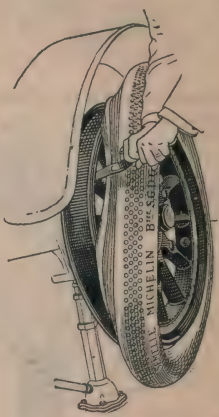

FIG. 34.

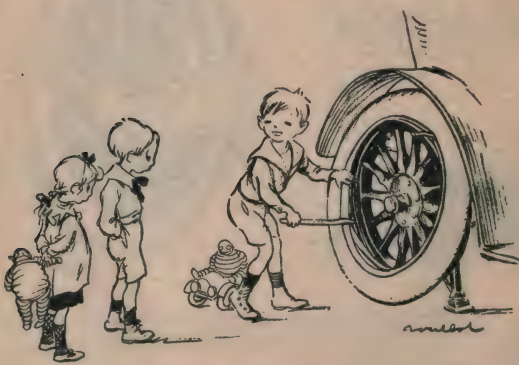
Insert the large lever (or the small one, with its bent end uppermost) behind the inner bead in the middle of the detached portion of the outer bead, so that it rests on the outer clinch (Fig. 33). Then pull the lever towards you (Fig. 34). The cover and tube will come off together.

---

(1) If the bead will not come off, it is because the levers are too far apart. If, on the contrary, it slips back again, it is because the levers are too close together. In order to detach the bead successfully, the hands should be drawn away from each other whilst pressing down the levers.



"Well! You are strong!"
"No, I'm not, I only weigh five stone; but I am fitting with the new Michelin levers."

# FITTING AND DETACHING DETACHABLE RIMS AND TYRES.

Our valve (Fig. 35) for tyres on detachable rims is the same as our ordinary long car valve, with the exception that it comprises in addition the metal washer "K" and rubber washer "V". The latter is 4 mm. high for the ordinary valve and 10 mm. to 11 mm. for the Bolt-Valve. The valve-hood extension "P" is only used on spares. It must be removed when fitting the rim to the wheel.

# TYRES ON DETACHABLE RIMS.

## TO FIT DETACHABLE RIM AND TYRE ON THE WHEEL.

*N.B.*—The operation is the same whether the tyre is fixed to the rim by means of bolt-valve or with security bolts.

## DETACHING.

**1. Jack up the wheel.** (1)

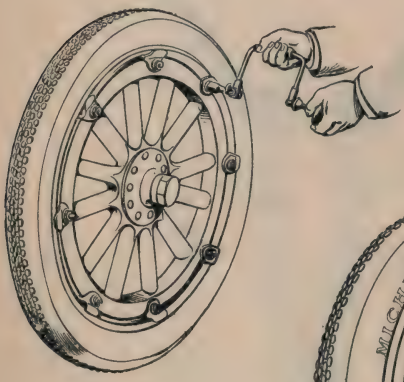

FIG. 36.

**2. Take off the valve-hood.**

Or if the bolt valve is not used, the valve-hood washers " M " and " N."

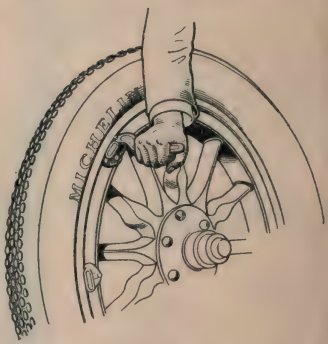

FIG. 37.

**3. Unscrew the clamp nuts** (2) (Fig. 36).

**4. Remove the clamps.**

The clamps may be easily removed with the hand. If they resist, ease them with the " Tenor " lever (Fig. 37).

---

(1) The jack must be placed under the car in such a way that the car is not supported upon any fragile part of the axle, such as the lubricator.

(2) Before unscrewing the nuts, place a drop of oil on the end " H " of bolt, which passes through the nut " E " (Fig. 38). This is indispensable if the bolts are muddy or rusty.

FIG. 38.

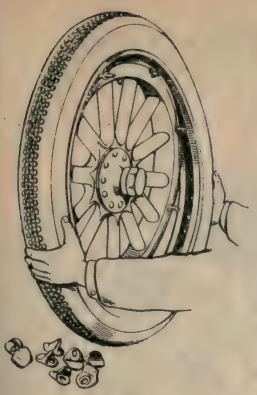

FIG. 39.

**5. Remove the detachable rim.**

Turn the valve to the top, and pull the bottom of the rim from the wheel with both hands. Then raise the tyre in order to disengage the valve (1) (Fig. 39).

---

## FITTING.

**1. Prepare the valve.**

Remove the valve hood "S" and metal extension "P" (Fig. 35).

Verify the pressure (see p. 44) and screw the valve cap up tight.

**2. Place the detachable rim on the wheel.**

The valve hole should be at top of wheel. Fit the valve in its hole, and the lug into the socket provided for it on the wheel. Then push the rim well on to the wheel. Fit it into place by strjking it with the palm of the hand.

Fit each clamp on to its bolt, commencing with one opposite the valve ; give the nut two or three turns, sufficient to bring it into contact with the clamp (2).

**3. Screw up the clamps.**

Give several turns to the nuts of the two clamps opposite the valve, then of the two adjacent clamps, and so on all round the wheel, finishing with those on each side of the valve.

Then screw up the clamps quite tightly, working in the same order (Fig. 36).

**4. Replace the valve-hood.**

Or if the bolt-valve is not used, the washers "M" and "N" and the valve-hood.

## TO CHANGE A TYRE FITTED WITH THE BOLT-VALVE ON A RIM DETACHED FROM THE WHEEL.

For fitting and detaching tyres with bolt-valve or security bolts on a bench or on the ground see our previously issued instructions. Either the old or new type levers can be used for fitting under the old methods.

Once the tyre is fitted and inflated, supposing it to be carried as a spare, it is necessary, before screwing up the valve-hood nut, to put on the valve the extension P (Fig. 35), which will be removed before fitting the rim on the wheel. (Without the extension, the hood, when screwed down, would press on the valve-cap and probably cause a leak.)

To fit a tyre fitted with security bolts to a detachable rim we refer our readers to former editions of our Guides.

---

(1) The rim comes by itself and the valve is easily detached.

The valve may also be turned to the bottom, and the detachable rim removed by pulling it with the hand from the top, but, in this case, if the wheel is not sufficiently raised on the jack, the tyre rests on the ground before the valve can be released. It thus risks being damaged.

(2) If it is difficult to fit a clamp by hand, introduce the end of a lever between the rim and the wheel. Press down on the lever in order to increase the space, and so force the clamp into place.

# THE MICHELIN TWIN TYRE.

The strongest single tyre, the 135, will carry a maximum weight of 1,430 lbs. With a heavier weight the tyre works under abnormal conditions, and will wear out very quickly.

**Its use will be very costly** on a **heavy and fast** touring car which destroys the tyres, but which, however, could not be used without the comfort thereby obtained.

**The ordinary single pneumatic is quite impracticable for the industrial or commercial car, small wagon, or delivery van** weighing from 2,200 to 3,300 lbs. when laden. These, therefore, fall back on solid tyres which, by want of elasticity and the abrupt shocks they produce, soon deteriorate the car.

The **Michelin "Jumele"** or **Twin-Tyre** supports with two tyres a weight which would burst a single tyre and moreover it gives to such cars as mentioned above, a **resilient, strong, and economical pneumatic tyre.**

FIG. 40.

**It is the practical solution of the tyre problem for the heavy touring car and the commercial van.**

---

A wheel fitted with Twin Tyres comprises :—

The special wheel itself ;
Two expanding detachable rims ;
Two tyres fitted with the bolt-valve.

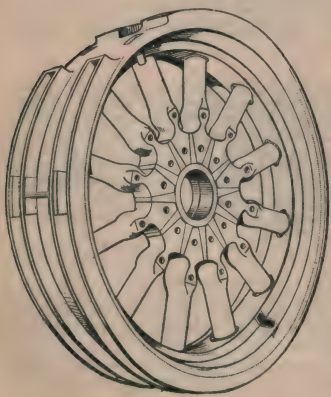

FIG. 41.

## The Wheel.

The Twin Tyre Wheel (Fig. 41) is composed of :—

A **steel crown** having on the *outside* a series of ribs which support the detachable rims, and on the *inside*, sockets in which the heads of the wooden spokes are fitted (*there is therefore no wooden felloe*).

A **steel cone** called the **shrinking cone** (Fig. 41), which forms the hub on which rest the hard wood wedges which are driven in between the feet of the wooden spokes.

## The Rims.

The **expanding rim** (Fig. 42) is cut opposite the valve.

By separating the ends of the rim, the tyre being already fitted and inflated on the rim, the rim is opened, and it may then be placed easily on the ribs of the steel crown. Then by bringing the two ends of the rim together again the rim is closed and it is contracted on to the ribs. It thus becomes in reality a **fixed rim,** and its fitting is regularly assured all round the wheel.

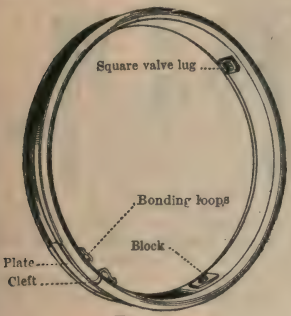

FIG. 42.

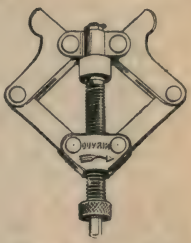

FIG. 43.—EXPANDER.

## The Expander.

The expander (Fig. 43) is a special tool fitted with a screw which can be turned with a brace (or tommy) and box-spanner.

To *open the rim* insert the rounded ends into the bonding loops, the copper plate "ouvrir" being on top (Fig. 45).

Turn the milled headed screw by hand in the direction of the arrow until the rounded ends hold in the loops.

*If the expander is well placed, it should not be possible to pull it out with the hand, and it should be perpendicular to the rim.*

Then open the rim **fully** (Fig. 54) with the brace (or tommy) and box-spanner (Fig. 44).

*When the expander is removed, after the opened rim has been placed on the wheel, the rim should close itself. Sometimes, however, owing to rust or slight deformation, the rim will not close itself. It will be sufficient, in such a case, to give it one or two sharp blows close to the cleft.*

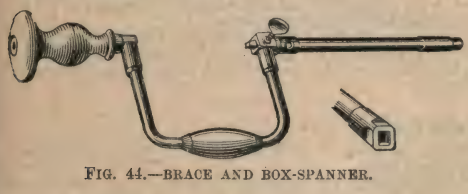

FIG. 44.—BRACE AND BOX-SPANNER.

FIG. 45.

## The Fastener.

The fastener (Fig. 45) is the part which keeps the rim contracted on the crown, in conjunction with a detachable bronze nut which is fixed on the crown with a wing nut and in which, the detachable rim being placed on the ribs, the bolt of the fastener is screwed home with a brace (or tommy) and box-spanner. The wedges of the fastener being in the loops on the rim, now close these loops together and thus the rim is securely fixed on to the crown.

Finally a safety spring is fastened on to the square head of the screw, which prevents it from turning and unscrewing itself.

## Up-Keep.

After use, the screw of the expander and also of the fastener should be carefully wiped and greased so as to prevent rusting.

## THE TYRES.

There is nothing special about the covers.

The inner tubes of Twin-Tyres are fitted with the bolt-valve, but these valves must be fitted with the three short pieces D, O, and BC (Fig. 46), in place of the four detachable pieces D, O, B and C of the ordinary valve.

*This modification is only necessary for the inside tyre, because the long pieces of the ordinary valve would not allow the tyre to be placed on the inside ribs of the crown.*

*It is better, however, to make this modification for all tyres (outside tyres, front wheel tyres, and spares), thus making all interchangeable.*

*Moreover, these pieces may be obtained from all our stockists, and the motorist can easily make the change himself in a few minutes.* The body of the valve A is not changed.

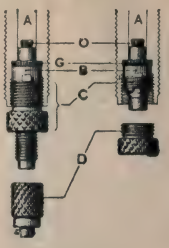

FIG. 46.

FIG. 47

With the valve thus shortened, a special connection (Fig. 47) will be required for inflation. This connection serves two purposes :—

(1) *When inflating*, the end *a* is screwed on to the valve after the cap D has been removed, and the connection *c* is attached to the tube of the air cylinder.

(2) *When fitting the Twin-Tyre valve pieces*, the short piece BC carrying the short plug O is screwed into the body of the ordinary valve A by means of the end *b*.

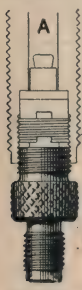

FIG. 48.

*The inner tube of an outside tyre or front wheel tyre may be changed without detaching the rim. In order to do this, screw a connection extension into the body of the valve of the tube to be fitted* (Fig. 48) *which permits the valve under the crown to be reached once the fitting is done, and which serves also as an inflation connection.*

In any case all valves must have a *rubber air-tight washer* pressing on a *steel washer*, which itself rests on the nut I fixing the plate of the bolt-valve. Similar washers are used on tubes fitted with the bolt-valve for detachable rims with clamps (Fig. 35).

The *fitting of a tyre* on the rim and the *detaching* may be done on a table in the ordinary way. Care must be taken, however, to avoid striking the ends of the plate bridging the cleft, with levers, as risk is incurred of cutting the rubber tags with which they are protected.

Spare tyres (*inflated tyres on the rim*) carry a valve-hood extension on which the valve-hood is screwed.

This extension must be removed when fitting the rim on the wheel.

### The Twin-Tyre Outfit.

The *outfit* (Fig. 49) contains all tools necessary for fitting twin-tyres, as well as several spare parts.

With the *outfit*, all the tools are immediately to hand, and they cannot get damaged or lost, and one is sure that no tool has been left behind.

*We shall be pleased to weigh any car at our premises,*

FIG. 49.

### Contents of the Outfit.

It includes :

**Fitting Tools.**

1. A box-spanner.
2. A tommy.
3. Two expanders.
4. An inflation connection.
5. A fastener.

**Spare Parts.**

6. A safety-spring for fastener.
7. A detachable bronze nut for fastener.
8. A valve-hood.

A pocket inside the case containing :—

Three valve plugs "O" (Fig. 35).
Two valve-caps "D" (Fig. 35).
Two valve interior parts "BC" (Fig. 35).
Two rubber washers "G" (Fig. 35).
Two washers "F."
One connection extension (Fig. 48).

It is also advisable to carry a brace.

The only tools which are absolutely necessary are : an *expander* (Fig. 43), an *inflation connection* (Fig. 47), a *box-spanner* with a *tommy* or *brace* (Fig. 44).

# DETACHING TYRES FROM TWIN-WHEELS.

## I.—Outer Tyre.

Having jacked up the wheel:

**1. Remove the valve-hood and the safety-spring of the fastener;**

**2. Remove the fastener** by unscrewing the bolt with the box-spanner and brace or tommy.

**3. Open the rim** with the expander (see p. 55).

**4. Detach the Rim;** Turn the wheel until the valve is at its highest point. Pull the tyre out from the bottom so as to clear the bonding loops from the crown and then lift the tyre bodily to free the valve from its socket (Fig. 50).

NOTE.—*A detachable rim on an ordinary single wheel is detached in exactly the same manner as the outer detachable rim of a twin-wheel.*

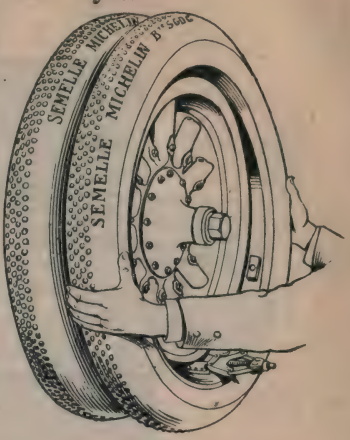

FIG. 50.

## II.—Inner Tyre.

**1. Remove the outer tyre;**

**2. Remove the detachable bronze nut of the outer rim** by unscrewing its wing nut (Fig. 51).

**3. Remove the valve-hood nut and the safety spring of the fastener;**

**4. Remove the fastener** by unscrewing the bolt with the box-spanner and brace or *tommy*.

**5. Open the rim;**

**6. Pull over the detachable rim on to the outer ribs,** pulling first near the expander, then near the valve, and finally remove rim as described above.

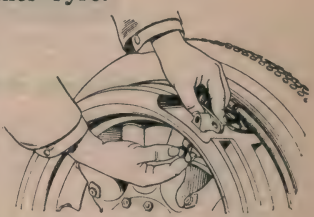

FIG. 51.

FIG. 52.

# FITTING TWIN-TYRE EXPANDING RIMS.

## Inner Tyre.

**1. Prepare the rim and the wheel.**

Carefully clean the crown (valve-lug sockets, ribs, block seats, bonding loops), and the rim. (*It is absolutely essential that no particle of gravel or mud remains between the crown and the rim.*)

Place the inner detachable nut on the crown (as the outer nut is placed in Fig. 51) and screw up its wing nut, *but not tightly.*

Take off the valve-hood nut and the extension (*which is only used on a spare*) and open the rim with the expander (Figs. 53 and 54).

**2. Place the rim on the inner ribs.**

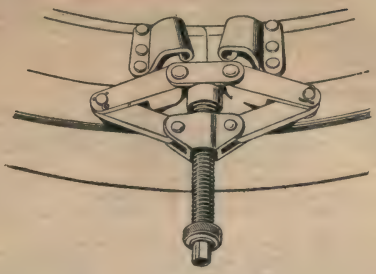

FIG. 53.

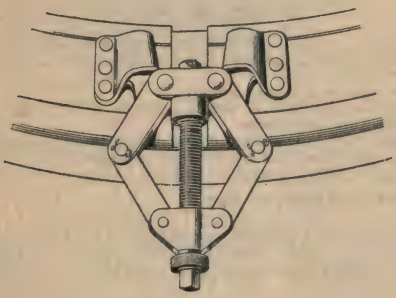

FIG. 54.

Turn the wheel until the valve-hole is at top ; raise the tyre with both hands and put it on the outer ribs (Fig. 55), and at the same time place the valve in the valve slot. (*Take care not to knock the valve against the crown, as damage to threaded part of the valve might result.*) Then push the tyre alternatively at the valve and the expander, until it rests on the inner ribs and the lug falls into position (Fig. 56).

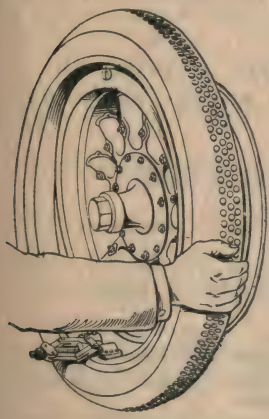

FIG. 55.

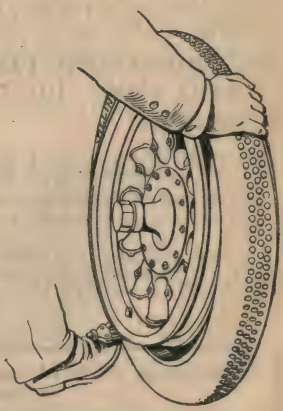

FIG. 56.

**3. Fix the rim.**

Screw up tightly the valve-hood nut.

Remove the expander with the brace, making certain that the two blocks fall properly into position between the ribs. *If they do not, give several blows with the palm of the hand on the tyre so as to make them fall into position.*

**4. Fit the fastener.**

*Grease the screw of the fastener as precaution against rust, also the wedges so that they slip easily into the bonding loops.*

*Put the fastener screw into the detachable nut, turning it with the fingers at first in order not to cross thread the bolt stem.*

*Then screw the fastener tight with the tommy or the brace so that the rim is firmly fixed on the crown, and does not move on it.*

*Turn the square head of the screw to its correct position, and fit the safety spring.*

*Screw up tightly the valve-hood nut and the wing nut.*

NOTE.—The fitting of the outer tyre is the same as for the inner tyre or for the single tyre on the front wheel.

## To test the Fitting.

This fitting is a quick and easy one, but it is essential that it is correctly done. This means that the rim fits well all round the wheel, and is firmly bonded to it.

The fitting may be tested at a glance :

(1) See that no daylight is visible between the rim and the crown round the valve and the blocks.

(2) See that there is the same space, to within a millimetre or two, between the two tyres all round their circumference. This may be easily done by turning the wheel round and looking at it from the end.

**Care of the wheel in use.**

Owing to the great distance which a Twin Tyre will cover, it is certain that a long time will elapse before a change of the fitting on the wheel will be necessary. Under these conditions, we advise our clients to thoroughly overhaul the rims, wheels, and closing apparatus *every six months.*

**The rims.**

If the rims are rusty, jagged or bent, they should be properly overhauled in the same manner as ordinary rims.

**Rusty nickel plates.**

The plates must slip easily on the rim, and therefore their surface must be quite smooth. Our nickel plates are galvanized and do not, therefore, easily rust. If, however, a plate should become rusty, or if the rubber tags get cut off by a lever, they should be sent to us for replacement.

## DETACHING AND FITTING A TYRE ON AN EXPANDING RIM REMOVED FROM THE WHEEL.

For details, see our previously issued instructions, and use either the old or new type levers for fitting under the old method.

Two precautions which should be taken :—

(1) Take care not to cut the rubber tags of the nickel plate with a lever.

(2) When detaching, and performing the operations shown in Figs. 31 and 32, place the lever a few inches away from the ends of the expanding rim so that it does not rest on the fastener sockets.

**See on page 72 form to be filled up giving details of your car.**

# OUTFITS.

**Fitting Outfit** (Fig. 57), for tyres with bolt-valve.

This outfit contains in a box all that is necessary for fitting our tyres fitted with the bolt-valve.

Lever "Forum."
Lever "Fusil."
Hook-lever "Fez."
Tube of French chalk.

FIG. 57.

**"Indispensable" Outfit** (Fig. 58), for tyres with bolt-valve.

The same as above, but also containing various accessories for temporary roadside repairs (mastic, patches, rubber solution, etc.).

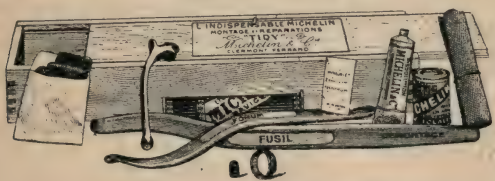

FIG. 58.

## COVER REPAIRS WHICH CAN BE UNDERTAKEN BY THE MOTORIST.

**1. Bursts and cuts.**

If you have a spare cover, it is best to use it and send us the burst cover to be repaired.

FIG. 59.

If you have not a spare cover use our *tubular patch*, and, if necessary, *a gaiter*.

## The Michelin tubular patch.

The tubular patch, moulded to the shape of the cover, completely surrounds the tube like a sleeve protector, inside which the tube may stretch, but it cannot move the patch out of position. The tubular patch should not be solutioned.

## To fit the tubular patch.

I.—*When the bolt valve is used.* Detach the cover. Partially inflate the tube, and place it in the cover. Draw out about 24 inches of the tube at the point where the cover is cut.

Place the patch inside the cover so that it completely covers the burst, remembering that the patch should cover from 1¼ to 1½ ins. all round the edge of a cut near the bead (Fig. 59).

FIG. 60.

Replace the inner tube, making the patch cover it as regularly as possible, the two ends outside the cover being of equal length.

*Turn back the end on the side of the first bead to be fitted* (not *the works number side*); *this is very important, then the other end on the second bead.*

Place the cover on the rim.

Fit the first bead completely.

Deflate the tube, and pass the hand between the rim and the tube in order to rectify any folds which may have formed on the ends of the patch.

Partially inflate the tube, and finish fitting, being careful not to finish near the patch.

During these operations, take great care not to displace the patch.

II.—*When security bolts are used.* Detach the cover.

Place the patch inside the cover as described above. Once well in position over the cut or burst, mark out the position of the two ends of the patch on the cover with a pencil or piece of chalk (Fig. 60).

Take out the patch. Fit the first bead on the rim.

Fit the security bolts and replace the inner tube.

Partially inflate the tube (very slightly).

Take out about 24 ins. of the tube near the burst.

Place the patch round the tube, the inside being in contact with the tube, the outer side on top. Take the patch and inner tube in the hand, and place them in the cover (Fig. 61). Then make the ends of the patch coincide with the marks made on the cover.

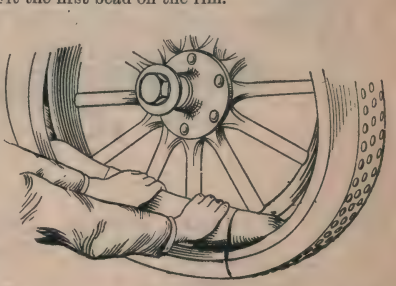

FIG. 61.

Pass the hand between the rim and the tube in order to straighten out any folds which may have formed on the ends of the patch.

Finish inflating the tyre partially.

Fit the second bead, and inflate to the required pressure.(1)

---

[1] If these instructions are carefully followed, the fitting of a patch should not take more than three to five minutes.

If the burst is so situated that the patch falls over the valve, displace the cover from its right position without troubling about the valve slits falling directly over the valve hole; a *used* cover can be without difficulty fitted when it is so displaced.

**In order to use the MICHELIN GUIDE with the greatest ease, read carefully the Explanatory Chapter, pp. 1 to 12**

### The Michelin Gaiter.

If, after inflation, the cut gapes open very much, use our gaiter.

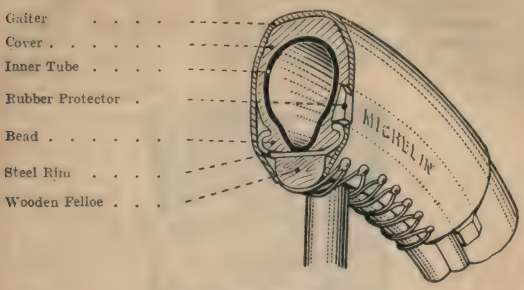

FIG. 62.

To fit the gaiter deflate the tyre until there is only a pressure of 2 lbs., place the gaiter, and lace up tightly crosswise.

Inflate to the required pressure.

If the cut is on or very close to the bead, a rubber protector must be placed on the cover, under the gaiter, so as to be in contact with the rim.

### Small Cuts.

If the cover is only cut ¾ inch or less, and the car is a light one, use the **roll of proofed canvas** instead of the tubular patch.

The canvas should overlap the cut by 1¼ to 2 inches all round. Paint the gummed side of the patch with rubber solution, and, when nearly dry, stick it over the cut. Chalk sparingly all over the repair, and re-fit the tyre.

## SUPERFICIAL CUTS.

**Michelin Mastic.**—After travelling on stony roads, tyres will probably present cuts of a more or less serious nature. When the cuts are deep, and affect the canvas, the cover should be sent to us for repair, but if the cuts are not deep, plug them with Michelin mastic in order that water may not reach the canvas and perish it. Proceed as follows :—

1. Clean the cut, removing dirt and gravel with a wooden scraper.
2. Wash the cut with benzine or petrol with a brush, and leave it to dry.
3. Paint sparingly with solution the edges and interior of the cut, and leave it to dry for five minutes.
4. Take a piece of mastic large enough to fill the hole, work it up with the fingers and press it into the cut with a spatula.
5. Pinch the cut with the fingers in order to facilitate the adhesion of the mastic, or lace it up tightly with tape or string.

Leave the repair to dry for 5 or 6 hours before using the tyre again.

The box of mastic should be kept tightly closed. If it hardens in the box, soften it with a little benzine or petrol before use.

**Swellings.**—These sometimes occur on the surface of the cover, causing the canvas to detach itself from the rubber.

The best thing to do is to deflate the tyre, and enlarge the detached portion a little with the moistened blade of a knife. Then clean the interior carefully with a wooden scraper, and a brush dipped in petrol.

When the incision is quite clean, apply two or three layers of solution and let it dry for an hour, propping the edges of the opening apart with a wooden match. Then close the opening and bind down firmly with a strap or piece of cord ; after which, fully inflate the tyre and let the repair dry for at least 6 hours.

## INNER TUBE REPAIRING OUTFIT.

This outfit includes the following articles in a metal box :—

2 large tubes of rubber solution.
5 assorted patches
1 packet valve parts containing two washers G, 2 discs F, 1 plug O.
Valve caps complete.

The easiest way to repair an inner tube is to use the bevelled-edge rubber patches.

FIG. 63.

### How to apply a patch.

Choose a patch which will cover the hole in the tube with a margin of ¾ to 1¼ ins. all round.

1. Thoroughly clean the surface of the tube round the puncture, removing all humidity and dirt, by rubbing it vigorously with fine glass paper. Place the tube on some hard, smooth surface and rub it until it has a bright red colour. It is best to clean a portion bigger than the patch to be applied.

2. Paint with solution the two surfaces to be stuck together. Put on two coats, letting each one dry. The second coat should be allowed to dry until it sticks tightly to the finger (*i.e.* five minutes).

3. Apply the patch, and press upon it, more particularly at the edges. The sticking will be improved if the tube is placed on a smooth surface and the patch tapped all over with a round-headed hammer.

**In order to make a really good repair, it is very important that the edges of the patch should adhere perfectly.**

Chalk freely all round the patch, but avoid any accumulation of chalk.

Re-fit the tyre and inflate.

*Never stick canvas on an inner tube.*

NOTE.—Repairs made by a customer can only be temporary. They will hold if the tyre does not become overheated, but in order to obtain the same wear from a punctured tube as from a new one, it should be sent to us. We repair tubes by a special cold vulcanizing process, which our customers would be unable to make use of.

## LEAKY VALVES.

To test the valve, tightly screw the valve-cap D (Fig. 6, page 36), and turn the wheel until the valve is at the top.

Then take a glass filled with water, place it under the valve, and raise it so that the valve dips into it. If any bubbles rise, the valve leaks. Sometimes bubbles form upon, and adhere to, the metal. Unless they rise they do not indicate a leak.

The rubber parts of our valve are as follow (see Fig. 6, page 36) :—

1. The small rubber plug "O" lying in the body "A" of the valve.
2. The disc "F" of the cap "D."
3. The washer ring "G."
4. The joint on the inner tube (secured by the nut "I").

**Valve-cap.**—If this leaks, examine the rubber disc F (Fig. 6, page 36). If it is damaged, replace it by another from the green pocket of our outfit, which contains several.

Should you have no rubber disc, substitute a small leather washer, or one of cloth smeared with tallow or solution.

Never travel with a valve uncovered (our outfit contains two complete caps).

**Plug.**—It is there *to act as a valve during pumping*, and to ensure a certain air-tightness until the cap has been screwed down. No notice need be taken if it allows one or two air bubbles to escape.

If the plug whistles, the sound denotes the presence, in the valve, of a little dust or dirt. Clean the plug. If it is damaged in any way, replace it with another, which you will find in the green pocket of our valve outfit. Also, before replacing the plug, clean the interior of the valve (the seat of the plug) with a dry cloth.

**Washer ring "G."**—If the nut "C" is not screwed tightly enough the washer "G" will leak. It will leak also if it is damaged in any way. Our valve outfit contains two of these rings; but a piece of leather, or even thread dipped in tallow or wax, may be used instead.

When the valve is detached, be careful not to lose either the plug itself, or the rubber ring "G" which is fitted into the groove of piece "B" (Fig. 6). If when withdrawing piece "B" this ring clings to piece "A," it must be detached and replaced on piece "B" in the groove. Without it, it would be impossible to replace piece "B."

**Nut "I."**—Nut "I" must never be unscrewed; but it may work itself loose in time.

If, therefore, a tyre becomes deflated, and no leakage can be discovered in the tube, tighten nut "I"; but not too much or the tube will be damaged.

# REPAIRS EXECUTED AT OUR WORKS.

**Time required for repairs.**—The time required for repairs executed at our Works varies according to the nature and extent of the damage.

The number of articles to be dealt with makes no difference in the time required, which is generally from ten to twelve days for covers and from six to eight days for tubes. The special facilities afforded by our extensive works enable us to complete repairs with the utmost despatch all the year round. It must, however, be borne in mind that the time specified for repairs should be reckoned as from the date on which we receive definite authority to carry out the work and the goods themselves up to the moment we despatch the repaired goods from our Works.

We quite appreciate the anxiety of our clients not to be kept without their tyres longer than is absolutely necessary; but we beg to point out that we could not effect repairs more quickly without risking the efficiency of the work.

## Forwarding goods for repair.

In order to avoid all possible causes of delay, we cannot too strongly urge on our clients the necessity of securely attaching, to each parcel they send us, a label giving their full name and address.

As this label may be detached in transit, it is advisable to place a duplicate inside the parcel, and, at the same time, to send us a letter stating the size of the package and giving a description of the goods sent, and stating their works number and method of dispatch.

Wrap up inner tubes in several sheets of strong paper, in order to prevent injury in transit.

All parcels should be addressed: The Michelin Tyre Co., Ltd., 81, Fulham Road, Chelsea, London, S.W.

## Examination of goods requiring repair.

The cost of repairs varies according to the nature and extent of the damage sustained; consequently it is necessary for us to examine each article before reporting to our clients. We cannot express an opinion merely from a description. Moreover, before undertaking a repair, we wish to satisfy ourselves that, when repaired, the article may be expected to give such service as will justify the expense incurred. Many repairs are possible, but not all of them are advisable.

# CARE OF TYRES.

## 1. RIMS.

If you allow your rims to get into bad condition, the results to the tyres will be injuries so serious that, more often than not, repair will be impossible.

(*a*) **Rust.**—Do not allow the outside edges or the clinches of your rims to rust; otherwise they will become rough and jagged, and will cut the beads of the covers, causing serious damage. Polish the rusted parts with emery cloth, and give them a coat of black varnish. Clean the beads of the cover, and re-fit the tyre when the varnish is quite dry.

(*b*) **Roughened rims.**—If the edges of the rims show any roughness, or sharp ridges, be careful to smooth off with a file, and to rub the clinches thoroughly with emery paper. Then, before re-fitting the tyre, re-varnish the rim where it has been operated upon.

(*c*) **Bent rims.**—If the rim becomes bent, either by colliding heavily with some obstacle, or because it has been travelling upon a deflated tyre, have it straightened as soon as possible.

(*d*) **Rivets or screws projecting above the rim.**—Carefully file or hammer down the projecting ends, until they are quite level with the rim.

## 2. COVERS.

### Look after your covers carefully and you will double their life.

(*a*) **Neglected cuts.**—Small superficial cuts on covers should be filled with **Michelin Mastic** (see page 40), in order to keep out grit and water, which perish the canvas and cause bursts.

(*b*) **Drops of oil.**—Grease and oil are injurious to tyres. If oil is dropped on a cover the rubber will swell and detach itself from the canvas. When any oil marks are discovered, lightly rub them over with a petrol-moistened rag, and wipe clean with a dry one.

(*c*) **Under-inflation.**—Test your tyres frequently with the Pressure Tester, and refer to the Inflation Table (page 32).

(*d*) **Non-parallelism of the steering wheels.**—When your steering-wheel covers show unusually heavy wear, accompanied by *longitudinal* scratches on the rubber, the cause of the trouble, in ninety-nine cases out of a hundred, is non-parallelism of the wheels. Take the first opportunity to have your wheels tested, and the fault rectified. Otherwise your tyres will wear out very quickly.

(*e*) **Loose and crooked wheels.**—If marks of wear, instead of showing all over the surface of the tyre, are in one or two places only, the wheel is either very loose or crooked. Looseness can be dealt with easily; but only the manufacturers can rectify crooked wheels.

## Non-skids.

The precautions to take for the preservation of **Non-skids** (Michelin Semelles) are practically the same as for ordinary Michelin tyres. With **Non-skids,** however, sudden stops and abrupt starts should be guarded against even more carefully.

The leather of Non-skid tyres is liable to harden and eventually to crack if not carefully looked after, especially on certain roads.

The use of **"Skidcreme"** for **Michelin Non-skids** (Semelles) keeps the leather supple without injuring the rubber, and prolongs the life of a tyre.

**How to use "Skidcreme"—**

1. Brush and wash perfectly clean the leather of the Non-skid. Leave it to dry.
2. With the brush supplied with each box, apply the Skidcreme to the leather, avoiding to place any on the rubber or the extreme edges of the leather.
3. Rub well with a brush or cloth until the cream has well penetrated into the leather.
4. If possible, leave the tyre two hours before using it.

N.B.—When new, repeat the operation once a week. But afterwards, only apply the Skidcreme when the leather commences to harden.

## 3. INNER TUBES.

**Too little and too much French chalk.**—When fitting a tyre, never use too much or too little chalk.

An insufficiently chalked tube will stick to the cover and crease and easily become nipped during fitting. If too much chalk is used, it will accumulate into solid lumps which will puncture the tube and damage the canvas of the cover.

The safest plan is to follow closely the directions given on p. 47.

## 4. PUMPS.

Never let oil get into your valve ; the small plug would quickly swell and become firmly affixed to the interior, and could not be removed.

It frequently happens that a pump does not work well because the leather of the piston becomes dry. It is therefore advisable, before concluding that the pump is in need of repair, to ascertain the state of the leather, so as to avoid despatching it to the maker's unnecessarily.

If it is necessary to lubricate the leather plunger of the pump, first be very careful to remove the flexible tubing which carries the valve connection. Then, when the slight lubrication required for the plunger has been effected, give 20 or 30 vigorous strokes with the inflator.

This precaution will eject any excess of lubricant which would otherwise remain in the pump or tubing and be driven into the valve at the first stroke.

For lubricating the leather of the piston use no oils containing acid. The best oil for the purpose is fish oil. A non-acid oil may be used, but dries very rapidly, and does not easily penetrate the leather.

## Avoid careless driving.

(*a*) **Starting.**—Whenever you start abruptly, your back tyres will skid round. Therefore always start gradually, especially when on sloping ground. **Ten abrupt starts will wear a tyre more than a run of 600 miles.**

(*b*) **Applying brakes.**—A sudden stop locks the driving wheels, so that they skid instead of revolving. This rough treatment is another cause of the rapid wear of tyres.

Stop gradually, therefore, easing the pace gently.

(*c*) **Sharp turns.**—Taking corners at full speed very often causes violent skidding, even on a dry road, which is also a great strain on the tyres. Moreover, if the tyres are under-inflated, there is every probability that they will be torn off the rims.

Always take corners slowly and carefully.

(*d*) **Skidding.**—During a skid the tyre may be damaged by sharp stones. A tyre can roll unhurt over even a pointed stone ; but if, instead of rolling, the tyre slides or "skids," any sharp object with which it comes in contact will make a deep cut—especially if the object be wet. Slippery roads, therefore, should be travelled slowly—and that, not only for the good of your tyres, but also for your personal safety.

The safest course is to fit, if not all your wheels, at least your driving wheels, with **Michelin "Semelle" Non-skids.**

(*e*) **Channels.**—If one of these is crossed at high speed, the car will come down suddenly, with all its weight, upon the tyres, which, especially if they are insufficiently inflated, will be severely pinched between the rims and the ground. And, besides this injury to the tyres, it is quite within the bounds of possibility that the shock will break a spring.

(*f*) **Newly metalled roads.**—When these cannot be avoided, the safest ways in which to travel over them are as follows :—

If the metal is laid in sections, 5 or 6 yards in length, with the ordinary smooth surface of the road lying between, do not slacken speed, but, when each metalled section is reached, take out the clutch, without applying the brake, and the momentum of the car will carry it over the section. Then put in the clutch again, gently, and, if the pace is too slow, change the speed.

Upon roads which have been newly metalled for long distances, it is best to travel very slowly. In this way, the possible damage to tyres will be limited to small surface cuts, which can be repaired easily with **"Michelin Mastic"** (see page 40).

## Care of covers and tubes.

All spare covers carried on the car should be well protected Our patent leather canvas cases will shield them effectually from the weather, and from contact with oil and grease (Fig. 64).

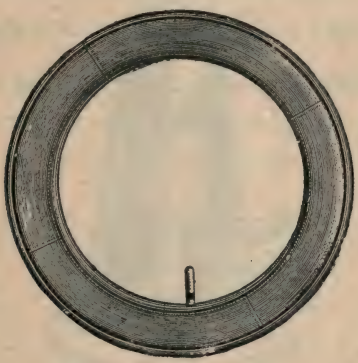

FIG. 64.

Spare tubes should be carried in waterproof bags containing a handful of chalk, and not in the cardboard boxes in which they are supplied.

If the car is to remain out of use for some months, deflate the tyres, and support the car from the axles.

When stored, covers should be kept in the dark, in a cool, dry place. Always remember that *the same conditions which rust iron will destroy canvas.*

Lay the covers flat, on dry boards, or hang them over a wooden rail. Never let them lie on the ground.

Inner tubes may be partially inflated and put inside the covers, the whole being covered with paper or canvas.

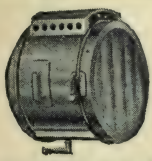
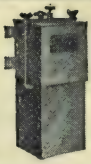
# ACETYLENE SYSTEM



RUSHMORE MULTIPLEX LENS DOOR HEADLIGHT.

RUSHMORE FLARE FRONT HEADLIGHT.

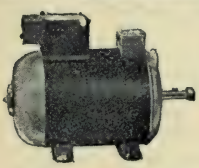


RUSHMORE SQUARE GENERATOR.

## 15,000 Motorists

in the United Kingdom have adopted the **RUSHMORE ACETYLENE SYSTEM** of Motor-Car Lighting. This evidence proves all we have claimed for it, and shows conclusively that our methods (which have remained the same for 12 years) are right.

# ELECTRIC SYSTEM



RUSHMORE NO. 1 DYNAMO.

RUSHMORE ELECTRIC HEADLIGHT.

RUSHMORE ELECTRIC SIDE LAMP.

## Rushmore Electric Lighting System

has now been developed to the point of perfection. Experts everywhere are unanimous that we have solved one of the most difficult electrical problems ever tackled. Nothing whatever is necessary but to switch lights on or off as required. Demonstrations given at any time at :—**RUSHMORE LAMPS LTD., 46, Brewer Street, Piccadilly Circus, London, W.**

Booklets of either or both systems willingly sent on receipt of Post Card

***Goods cannot be sold by loosely stringing together a few generalities and inserting them in publications chosen at random.***

THIS is an unalterable truth. Actual experience has proved it to hundreds of firms—hundreds of firms whose greatest selling force to-day is newspaper publicity.

Hence another truth: Press advertising, expertly handled, pays, and pays handsomely.

But it *must* be expertly handled.

Successful advertising means the co-operation of advertiser and advertising agent. No advertiser working alone can get the best results; he must draw upon that fund of "inside information," sound advice, and technical service which only a capable, experienced advertising agent can give.

This surely stands to reason. You know much more about the trade secrets, the limitations and possibilities, and the technicalities of your line of business than anybody does who is not in that line. So does the advertising agent know more about the inner workings of *his* line of business just in exactly the same way. Thus, by combining your knowledge of your business with his knowledge of his business, you can face the problem of your advertising with the complete confidence that the publicity will be effective; and you can be certain that every pound spent will be ***profitably*** spent.

**If you desire to go further into this matter along the lines mentioned above, send for Booklet and Full Information Post Free.**

Ordinary intermittent engine-work is no real test of the effectiveness of a lubricant. It is when an oil shows its quality under long spells of "all out" driving, that its true value can be fixed. And that is how we want you to test

# Champion
## Motor Oil

to prove that speed pressure or temperature makes no difference to its lubricating value; and that Champion prevents wear and tear of bearings; that it deposits no carbon; and that it is extremely economical.

# Illustrated London News

THE OLDEST AND BEST ILLUSTRATED NEWSPAPER

**Represents all that is best in English Journalism. It is among Illustrated Papers "The Father of the House"; The Pioneer Paper of Illustrated Journalism.**

**THE ILLUSTRATED LONDON NEWS** is generally conceded to be the most widely-circulated of all high-class Illustrated Newspapers. It is to be seen in the principal hotels in all parts of the world, and is posted by English people to their sons and brothers in the most distant countries and most far-away colonies.

# The "Condick"

## All-Weather Body.

- The only successful All-weather Body manufactured.
- Fitted as standard by all car manufacturers.
- Very much lighter than Cabriolette—practically no heavier than Touring Body with Hood and Screen.
- Combines the advantages of a Landaulette with those of a Touring Body.
- Is easily manipulated by one person from inside the car.
- All rattle entirely eliminated.

# There's no getting away from a

# Greener Gun

No other guns can equal the Greener for regularity of pattern (i.e. even distribution of shot) combined with efficient penetration—"the force that kills." It isn't what we say; facts prove it.

W. W. Greener was the first gunmaker in the world to "harness" the shooting of a gun. Prior to the introduction of his world-famed system of choke boring, "pattern" had been the gunmakers "will o' wisp": W. W. Greener made it his servant, and all the World's honours have been won with Greener Guns.

This is but one of their many outstanding features. You get "gun perfection" when you shoot a Greener Gun.

**Hammerless Guns 13 to 70 Guineas.**

An automatic pistol is an ideal weapon for self defence—it lies flat in the pocket and is always ready for instant use.

# THE SPHERE

**Price Sixpence Weekly.**

"We consider THE SPHERE

## 'The Times' of Illustrated Journalism."

*So writes a Correspondent from Sofia, in Bulgaria.*

**BUY THE SPHERE** for the **Schoolboy,** who will learn much from its diagrams.

**BUY THE SPHERE** for the **Soldier-Son,** who will enjoy its military pictures.

**BUY THE SPHERE** for the **Son in the Navy,** who will enjoy its ships and expert Naval matter.

**BUY THE SPHERE** for your **Married Daughter,** who will enjoy its pictures of Fashion.

**BUY THE SPHERE** for **Yourself,** because of its countless attractions, to say nothing of its £2,000 Accident Insurance, which is secured to you without further trouble upon an annual subscription of 29/6, or 26/- direct from any newsagent.

# Why is the Typewriter so universally adopted ?

Certainly not for a fad—business men do not take things up without good reason.

No, it is because it is progressive. It is one of the pace-makers of modern commerce. You cannot do things at the prevailing speed without it.

You must have a typewriter but —don't get anything. Get a machine which has been tried and tested like the

# YŌST

and you will save time and money, derive satisfaction from the quality of the work and be possessed of a permanently efficient writing machine.

**TWELVE kings and queens, many ruling princes, and a large number of most discriminating motorists, use Bleriot lamps exclusively. This is neither a fashion nor a fad. Royal and loyal motorists choose Bleriots because they know their merit.**

# BLERIOT
## NO-GLARE LAMPS

**never blind. The safety of motorists and pedestrians is assured by the constant non-dazzling device, yet an intense light is projected right on to the road and far ahead.**

**We were the pioneers of the motor lamp business; also the originators of dynamo lighting sets.**

# KLAXON

*The Public Safety Signal*

TYPE L.

TYPE S.

**The KLAXON** is an ideal Warning Signal for all kinds of Motor Vehicles. It is constructed on a scientific formula having the effect of producing a penetrating note which will pierce the thickest fog, and is projected under ordinary conditions to at least a mile. It is operated by an Electric Current from a Secondary Battery of either 8 or 12 volts.

**The KLAXON** is a motor driven instrument, and the sound is produced by the rubbing of a toothed wheel at very high speed against a button rivetted to the centre of a Chrome Vanadium steel diaphragm.

Users are universal in their expressed opinions of the value of the Klaxon in affording the greatest security from the risks of road travelling.

The cost of a Klaxon Horn is soon defrayed by the great saving of wear and tear on tyres, and brake mechanism.

Send for handsome booklet mentioning the "Michelin Guide."

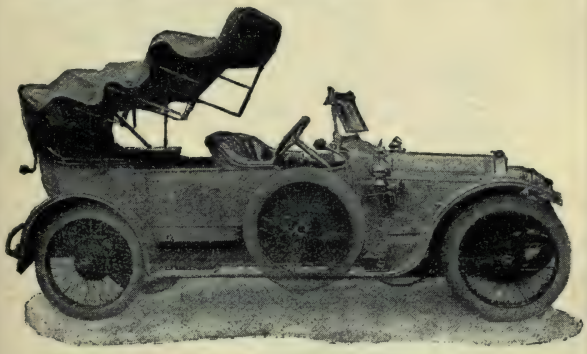
# There are no awkward side-stays on the

# "Canty" Hood

so that not only is access to the rear side-doors of the car quite unimpeded, but all the trouble of setting and releasing socket-pillars and manipulating locking-nuts is done away with.

To set the Canty simply pull it forward by its strap-handle and secure the screen-clips. It can be done in a moment from the driving seat.

When set, each extension arm binds its neighbour and so secures great rigidity throughout.



The cover is of the finest waterproof twill.

The frame is practically everlasting.

There is no neater, better finished, or more efficient hood on the market.

## Prices from £4 10s. complete according to size and style of fittings.

*Specify a Canty when ordering your new car.*

*Send for the Canty Hood Book. It gives all details.*

# Dynamo Electric Lighting for Cars.

THE Peto & Radford Car Lighting System solves the problem of making night-driving safe. It gives you a steady, flickerless, far-reaching light for head and side lamps, together with the comfort of a well-illuminated interior.

It is designed along practical lines—to give consistent service with utmost efficiency. The

**PETO & RADFORD LTD**

## Car Lighting System

is safe, automatic, economical, and reliable. The dynamo cannot over-generate because the output is controlled by a sensitive governor. This lifts the coned driving-pulley from contact with the flywheel when the engine reaches too high a speed, and prevents over-heating, and damage. Whether the car runs at 4 or 40 m.p.h. the light remains constant.

# Learn the Advertising Business

## OPPORTUNITY.

A LARGE number of business firms in England to-day—many of them very wealthy firms—are seeking men for responsible and highly-paid positions.

These posts they cannot fill from their regular staff, because the demand is for trained men—men trained in the principles of the Advertising Profession.

Advertising has taken the business world by storm. That is why the demand for advertising men is so urgent and so incessant.

A business man can no more succeed to-day, without advertising, than a steam engine can work without steam.

The demand for trained advertising men exceeds the supply by ten to one, and there seems no likelihood of the demand diminishing. Indeed, it is rapidly increasing.

The trained advertising man is recognised by the heads of manufacturing and trading concerns as of paramount importance.

Advertisement writers to-day control the destinies of huge business concerns. Most of these positions are held by young men and young women—men and women who felt they were worth something better than mere drudgery; who, fired by their ambition to rise, seized the opportunity of entering this pleasant and lucrative profession.

Business men are searching far and wide for trained advertisement writers; the demand is not only great—it is urgent.

The British School of Advertising differs from all other educational institutions, as it is under the control of men engaged in practical advertising—men who at the present moment are carrying on some of the largest and most successful campaigns.

The laws which govern the science of publicity are clearly explained, and the student is taken by easy stages through the whole theory and practice of advertising. But advertising as taught by the British School is not hide-bound in theoretic principles; it is based on the experience the examiners have had in a hundred successful English campaigns.

Finally, the interest of the British School of Advertising does not end when the student has completed the course. The principals, being actively engaged in controlling the advertising of some of the wealthiest English firms, are in a position to recommend trained men to responsible positions as Advertising Managers.

*The Prospectus of the School will be sent Post Free on application.*

**IMPORTANT.—We will gladly put business firms into touch with promising young men.**

# Frankonia

## Domed One-piece

# Mudguards

Once fitted, they want no attention beyond cleaning. Made of light lead-coated steel, they can neither rust nor rot; neither will they warp. In dry weather, they will act as efficient dust-shields; on wet days, they will intercept every particle of mud from the wheels.

The secret of their complete efficiency lies in their downward sweep and broad deep domes. Let the speed be what it may; let the wind blow a gale; no mud from the wheels can pass these spreading guards.

**Specify Frankonias when ordering your new car.**

*"The Reason for Frankonia Domed One-piece Mudguards" is an interesting little treatise on scientific mudguard construction. Copies free on application if Michelin Guide is mentioned.*

Frankonias fit cars of all makes and sizes.

Prices from **£4** per set of four.

# Mortons'
# "Morris" Chair

All to whom the charm of a book appeals will be interested in this "ideal 'reader's chair,'" said "T.P.'s Weekly" recently.

May we, then, send you descriptive booklet ?

It contains portrait of the artist-craftsman, William Morris, who made the original suggestion for the design, and gives particulars of a unique combination of advantages, including

(1) Solid Oak frame, with broad arms for holding a book, etc.

(2) Adjustable back, giving the perfect position for reading, etc.

(3) Hygienic back cushion and **spring-upholstered** seat in corduroy velvet, both **loose**, thus preventing harbouring of dust, and (4) Disappearing sliding ash-tray attached to arm, for the convenience of smokers, if desired. And the price is only

**31/6** **Carriage paid in the United Kingdom.**

Ash or pin-tray to slide under arm, **9d. extra.**

Obtainable only direct from us. If not approved on receipt, we take back at our expense, and refund payment in full. (Made for the Colonies to order, with cane seat and no cushions.)

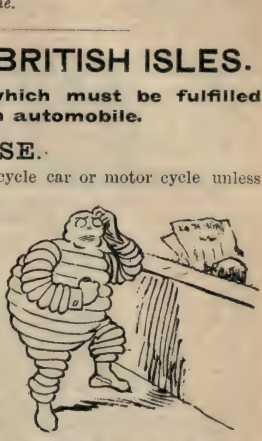
## TOURING IN THE BRITISH ISLES.

### Administrative formalities which must be fulfilled by the owner of an automobile.

### LICENSE.

No person may drive a motor car, cycle car or motor cycle unless holding a license.



This driving license must be produced when demanded by a police constable, and any person failing to do so shall be liable, on summary conviction, to a fine not exceeding £5. A license shall be valid for twelve months from the date on which it was granted, after which period it shall be renewable.

A person who desires to obtain the grant or renewal of a license shall apply to the Council of the County or County Borough in which he resides,[1] at least one month before the date on which the grant or renewal of the license is to take effect, and furnish the particulars set out in Form A or Form B, as the case requires.

FORM A (Application for License).

County [or County Borough] of

(1) Full name of applicant ; (2) postal address of residence of applicant ; (3) whether application is for license to drive a motor car, or for license limited to driving motor cycles ; (4) whether applicant is less than seventeen years of age, or in the case of an application limited to motor cycles, whether he is less than fourteen years of age[2] ; (5) whether applicant is the holder of a license, or has at any time previously been the holder of a license ; (6) particulars of any license which the applicant holds or has previously held ; (7) particulars of any endorsement on any license which the applicant holds or has previously held ; (8) whether applicant has at any time been disqualified for obtaining a license, if so, particulars as to the Court, by whom, the date on which, and the period for which the disqualification was imposed ; signature of applicant ; date of application.

FORM B (Application for Renewal of License).

County [or County Borough] of

(1) Number of the license ; (2) postal address of residence of applicant ; (3) whether applicant has, since date of last grant or renewal of the license, been disqualified for obtaining a license ; signature of applicant ; date of application.

A fee of 5/- shall be paid when applying for a license or renewal.

In case of a license or renewal being lost or defaced, the Council may, on payment of a fee of 1/-, issue a duplicate license or renewal.

The license may be suspended, for such time as the Court thinks fit, in case of any offence in connection with the driving of a motor car, other than a first or second offence, consisting of exceeding the speed limit.

[1] The county boroughs include only the large towns of the British Isles. Automobilists residing in a non-county borough, as well as those residing in urban and rural districts, must apply to the County Council and not to the Clerk to the Borough or District Council. In the County of London, the application must be made to the Clerk to the London County Council, Spring Gardens, S.W.

[2] Any person under the age of seventeen years shall be disqualified for obtaining a license, except that a license limited to driving motor cycles may be granted to a person over the age of fourteen years.

The Court can also declare the person convicted to be disqualified from obtaining another license for such further time after the expiration of a license as it thinks fit.

## REGISTRATION.

No motor car, cycle car or motor cycle may be driven without having been registered.

The owner must apply to the Council of any County or County Borough and furnish them with the particulars set out in the following form :—

FORM OF PARTICULARS TO BE GIVEN BY APPLICANT FOR REGISTRATION OF A MOTOR CAR.

County [or County Borough] of.....

(1) Full name of owner ; (2) postal address of usual residence of owner ;* (3) description or type of car ;† (4) type and colour of body of car ;‡ (5) weight unladen ; (6) whether intended for (*a*) private use ; (*b*) use for trade purposes ; or (*c*) use as a public conveyance ; (7) particulars as to the positions on the back and on the front of the car in which it is proposed to place the plates forming the identification mark. Signature of owner or person applying on his behalf. Address. Date of application.

* If the car is not intended to be kept at this address, please state *also*, if possible, where the car is proposed to be kept.

† *E.g.* a 12-h.p. car, or a steam lorry, or electric brougham, with the addition, in each case, of the name of the maker, or name by which the type is ordinarily known.

‡ *E.g.* Tonneau body painted yellow, or dogcart body painted black, picked out with red, or van body painted blue with the name of the firm upon it.

The fee for registration is : for a motor car or a cycle car, £1 ; for a motor cycle, 5/- ; and payable when applying.

The Council shall assign a separate number to the motor car and register it by making the required entries in the Register of Motor Cars, and shall forthwith furnish the owner with a copy of the entries.

If the ownership of a motor car is changed, notice of the change shall be given by either the new or the old owner to the Council with whom the motor car is registered, and an application shall also be made either to cancel the registration of the car or to continue the existing registration under the new ownership.

If an application is so made to cancel the registration of the motor car, and no application is made to continue the existing registration of the car, the registration of the car shall be cancelled accordingly, but if an application is made to continue the existing registration of the car, the new owner shall furnish the necessary particulars as to ownership, and on receipt of a fee of five shillings in the case of a motor car or cycle car, or of one shilling in the case of a motor cycle (which fees the Council are authorised to charge), the Council shall cause the necessary alterations to be made in the Register of Motor Cars, and shall furnish the new owner with a copy of the altered entries in the Register.

Any notice may be given or application or alteration made before the date of the actual change of ownership so as to take effect from that date.

If the provisions as to notice and application are not complied with, the registration of the motor car shall be void.

If any circumstance (other than a change of ownership) occurs in relation to any motor car which affects the accuracy of any particulars entered as respects that car in the Register of Motor Cars, the owner of the motor car shall forthwith inform the Council with whom it has been registered, and on receipt of such information the Council shall forthwith cause the entries respecting that motor car in the Register of Motor Cars to be amended accordingly, and shall furnish the owner with a copy of the entries so amended. No fee shall be charged by the Council in respect of any such amendment of entries or transmission of copy of entries.

If the Council are satisfied that a motor car which has been registered with them is destroyed, broken up, or permanently removed from the United Kingdom, or registered with another registering authority under the Act of 1903, or if the owner of a registered motor car, by application in writing, requests them to cancel the registration thereof (except where, in the case of a change of ownership, there is an application to continue the existing registration), they shall cause the entries in the Register of Motor Cars with respect to the motor car to be cancelled, and may, if they think fit, assign the registered number of the motor car to any other motor car, whether belonging to the same or any other owner.

NOTE.—*The penalty for neglecting to make a declaration for the purposes of registration, or for making an untrue declaration is* £20.

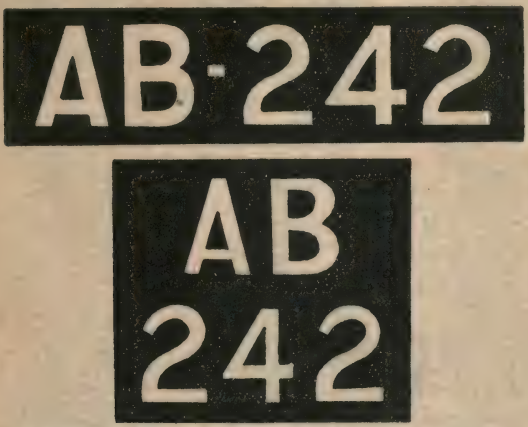
## IDENTIFICATION PLATES.

Motor cars, cycle cars and motor cycles must carry plates or marks indicating the registered number of the car and the Council with which the car is registered.

The mark shall consist of two plates of either of the shapes shown in the two diagrams below, or one of one shape and one of the other.

Designs, painted or otherwise, shown upon the car may be used instead of plates.

The ground of the plate must be black, the letters and figures must be white.



The alternative diagrams shown above are specimen plates drawn approximately to a scale of 1 : 7. The actual size of the plates will, however, differ according to the number of letters and figures required.

In the case of the plates for a motor tricycle or motor bicycle of a weight unladen not exceeding three hundredweights, each of the dimensions must be halved, and the shape of the plate need not be rectangular so long as the *minimum* margin between any letter or figure and the top, bottom, and sides of the plate is preserved (*i.e.* ¼ in. between adjoining letters or figures, and between the nearest part of any letter or figure and the top and bottom of the plate ; and 1 in. between the nearest part of any letter or figure and the sides of the plate).

The plates forming the identification mark shall be fixed, one on the front of, and the other on the back of, the motor car, in an upright position, so that every letter or figure on the plate is upright and easily distinguishable, in the case of the plate placed on the front of the motor car, from in front of the car, and in the case of the plate placed on the back of the motor car, from behind the car.

A Council with whom a motor car is registered may, if they think fit, supply to the owner of the car, if he so desires, the plates forming the identification mark on the car, and make a charge for them.

## ISLE OF MAN.

A person temporarily resident in the Isle of Man for a period not exceeding one month, and who uses his motor car for private purposes only, and has duly registered it under the English Motor Car Acts, and

carries the distinguishing mark and number required by such Acts, and the Regulations made thereunder, and who forwards to the Highway Board within twenty-four hours of arrival, his name and address and the distinguishing mark and number of his car, will not be liable to a penalty for not having his car properly registered [*i.e.* registered in accordance with the special Regulations in force in the Isle of Man].

A person shall not drive a motor car on a public highway (in the Isle of Man) unless he is licensed for the purpose (by the Island Authorities), or under the English Motor Car Acts, and being a person temporarily resident in the Island for a period not exceeding one month, and who has furnished particulars of his license to the Board, and a person shall not employ any person who is not so licensed to drive a motor car.

## LOCAL TAXATION LICENSES.

Automobilists must take out the following *Local Taxation Licenses* :—

MOTOR CARS, BICYCLES, AND TRICYCLES.

| | £ | *s.* | *d.* |
|---|---|---|---|
| Motor bicycle or tricycle of whatever horse-power . . . | 1 | 0 | 0 |
| Motor car or cycle car not exceeding 6½ HP. . . . . | 2 | 2 | 0 |
| ,, ,, exceeding 6½ HP but not exceeding 12 HP | 3 | 3 | 0 |
| ,, ,, ,, 12 HP ,, ,, 16 HP | 4 | 4 | 0 |
| ,, ,, ,, 16 HP ,, ,, 26 HP | 6 | 6 | 0 |

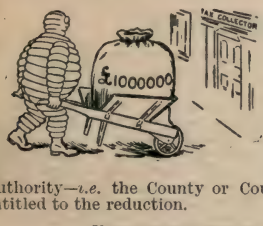
| ,, ,, ,, 40 HP ,, ,, 60 HP | 21 | 0 | 0 |
| ,, ,, ,, 60 HP . . . . . | 42 | 0 | 0 |

The horse-power of the car is to be calculated according to the Treasury Regulations (see below) printed on the form of Declaration, which must be filled in and signed by the applicant and handed in at the Post-office when the license is applied for.



Medical practitioners who keep a motor vehicle or vehicles for the purpose of their profession are entitled to a reduction of one-half of the duty, provided that they have previously satisfied the Licensing Authority—*i.e.* the County or County Borough Council—that they are entitled to the reduction.

## TREASURY REGULATIONS FOR CALCULATING THE HORSE-POWER OF MOTOR CARS.

(1) For the purposes of these Regulations the horse-power of any motor car deriving its motive power wholly from a steam, internal combustion, or other engine worked by a cylinder or cylinders, shall be taken to be—

(*a*) In the case of a single-cylinder engine the horse-power attributable to the cylinder of the engine.

(*b*) In the case of an engine having two or more cylinders the sum of the horse-powers attributable to the separate cylinders.

(2) The horse-power attributable to any cylinder shall be deemed to be proportional to the square of the internal diameter of such cylinder measured in inches, and shall be determined according to the number of square inches contained in such square, the unit being taken to be—

(*a*) In the case of a single-acting cylinder having a single piston, one horse-power for every $2\frac{1}{4}$ square inches.

(*b*) In the case of a single-acting cylinder having two pistons, one horse-power for every $1\frac{3}{8}$ square inches.

(*c*) In the case of a double-acting cylinder having a single piston, one horse-power for every $1\frac{1}{4}$ square inches.

(3) Any motor car deriving its motive power, or any part of its motive power otherwise than from an engine worked by a cylinder or cylinders, shall be deemed to be of a horse-power exceeding 12, but not exceeding 15, provided that where the motive power is derived in part from an engine worked by a cylinder or cylinders the horse-power of the car shall be deemed to be less than the horse-power attributable to the cylinder or cylinders of such engine.

(4) Where it appears that, in consequence of the exceptional design or construction of the engine of any motor car, the horse-power as calculated under the foregoing rules is substantially less than the power which the engine is actually capable of developing, the horse-power of the car shall for the purpose of these Regulations be taken to be the same as that of a car of equal efficiency deriving its motive power from a cylinder engine of the ordinary type.

(5) In measuring cylinders and calculating horse-power, fractions of an inch and fractions of a unit of horse-power are to be taken into account.

## MALE SERVANTS.

For a motor-car driver or any person employed by a motorist in any capacity performing that duty as a substantial part of his employment, an annual duty of 15*s.* is payable.

NOTE.—Licenses must be applied for before the end of January in each year, and within 21 days after the applicant becomes liable to the duty. Persons liable to the duty must sign a Declaration (Local Taxation No. 1), which can be obtained at any Money Order Office. The duty should be paid or sent with the Declaration. Cheques should be drawn to the order of "The Postmaster of .....," and crossed.

The penalty for neglecting to make a return or for making an untrue return is £20.

## EXEMPTIONS.

Licenses are not required :—

(1) Where the motor car or bicycle is used solely for the conveyance of any goods or burden in the course of trade and husbandry, and where the Christian name and surname and place of abode or place of business of the person, company, or firm occupying the same, shall be visibly and legibly painted in letters of not less than one inch in length.

(2) Any motor car used without payment for the conveyance of electors to and from the polling stations at municipal, county council, or parliamentary elections, and not otherwise used during the year.

(3) Motor cars kept but not used at any time during the year.

## ARMORIAL BEARINGS.

The term "armorial bearings" means and includes any armorial bearing, crest, or ensign, by whatever name the same shall be called, and whether such sign shall be registered at the College of Arms or not. And any person who shall keep a motor car, whether owned or hired by him, is deemed to wear any armorial bearing painted or marked thereon or affixed thereto.

A Local Taxation license to use armorial bearings on motor cars includes the use of such insignia in any other manner, and the fee payable in respect thereof is £2 2*s.* It may be obtained from any Money Order Office, on filling up Local Taxation Declaration No. 1.

NOTE.—No license is necessary in respect to the use of the Badge of the Royal Automobile Club, or of the Automobile Association and Motor Union.

# SPEED, PROHIBITION, AND CAUTION SIGNS.

1.

The following are the signs employed on highways :—

1. For 10 miles or lower limit of speed, a white ring 18 inches in diameter, with plate below giving the limit in figures.

2. For prohibition, a solid red disc 18 inches in diameter.

2.

3.

3. For caution (dangerous corners, cross roads, or precipitous places), a hollow red, equilateral triangle, 18-inch sides.

4. All other notices under the Act to be on diamond-shaped boards.

4.

The above signs are placed on the near side of the road facing the driver, with their lower edges not less than 8 feet from the ground, and about 50 yards from the spot to which they apply.

---

# CIRCULATION.

## SPEED LIMITS.

No motor car may be driven at a speed exceeding twenty miles per hour, and, where an order of the Local Government Board has been obtained, at a greater speed than that stated on conspicuous notice boards or plates.

If any person acts in contravention of this provision he shall be liable, on summary conviction in respect of the first offence, to a fine not exceeding £10, and in respect of the second offence to a fine not exceeding £20, and in respect of any subsequent offence, to a fine not exceeding £50, but a person shall not be convicted under this provision for exceeding the limit of speed of twenty miles merely on the opinion of one witness as to the rate of speed.

Where a person is prosecuted for an offence under this section, he shall not be convicted unless he is warned of the intended prosecution at the time the offence is committed, or unless notice of the intended prosecution is sent to him or to the owner of the car as entered on the register within such time after the offence is committed, not exceeding twenty-one days, as the court think reasonable.

## RULES OF THE ROAD.

(1) On meeting a vehicle approaching from the opposite direction, keep to the left.

(2) On overtaking a vehicle proceeding in the same direction, pass on the right or off side.

(3) Tramcars may be met or overtaken on the side of the road which is the safer.

(4) Pass a led horse on the side on which it is led.

(5) Whenever necessary, warning of approach must be given by sounding a horn, bell, or other instrument.

(6) On the request of any police-constable in uniform, or of any person having charge of a horse, or if any such constable or person shall put up his hand as a signal for that purpose, a motor-driver shall cause the motor car to stop and remain stationary so long as may be reasonably necessary.

(7) Motorists entering a main road from a side road should always use great care in so doing, and should not enter the main road until it is clear that they can proceed with safety.

(8) Refuges, and similar erections in a street must be passed on the near side.

(9) When the motor car is stationary, otherwise than through necessities of traffic, stop the engine when stopping at a house on the off side. Keep to the near side, passing the house, then turn round when opportunity occurs and approach the house so that the left side of the car is nearest the pavement.

(10) Always use the right hand for signals. When turning a corner to the right, hold out the right hand. When turning a corner to the left, wave the right hand in a forward direction at the right side of the car, to signify to those behind that they should pass forward on the right. When stopping, hold up the right hand perpendicularly.

---

# THE LAW ON MOTORING.

## OFFENCES.

**Driver.**—He must not drive at a speed exceeding twenty miles an hour, or, in certain specified areas indicated by signs, ten miles an hour; he cannot, however, be convicted unless he is warned of the intended prosecution at the time the offence is committed, or unless notice is sent to him or to the owner of the car within such time as may be reasonable, not exceeding twenty-one days. The latter notice should be a written one.

**Owners.**—If a driver is alleged to have committed an offence of what is commonly known as Driving to the Common Danger, it is the owner's duty, if requested, to give all the information which it is within his power to give, and which may lead to the identification of the driver.

He is always liable to be charged with aiding and abetting any offence committed by his driver. It has been held that a person who is in a car and has control of it, and which is being driven dangerously, can be convicted as a principal offender.

**Procedure.**—The offender is usually proceeded against by summons returnable in the police court of the district in which the offence was committed. Proceedings must be taken within six months of the offence.

In a few cases he is liable to arrest. The offender is subject to this if he drives to the common danger and refuses to give his name and address, or produce his license, or if the motor car does not bear the identification mark. If a driver causes bodily harm to, or is the cause of the death of, another person, he can be proceeded against by indictment.

**Penalties.**—The amount of the penalty depends, of course, on the nature of the offence and the number of previous convictions. The fines which may be inflicted range from the sum of £5 to £50.

In the case of a second or subsequent conviction of an offence under the Motor Car Act, for which no special penalty is provided, a term of three months' imprisonment can be imposed. The license must be endorsed and is liable to be suspended, and the holder may be disqualified on a conviction for any offence under the Act, or of an offence in connection with the driving of a car other than a first or second offence consisting solely of exceeding the speed limit.

Imprisonment can also be imposed for causing grievous bodily harm or for manslaughter.

## HINTS ON PROCEDURE.

Unless the defendant answers personally to the summons, he should be legally represented, as otherwise he is likely to be arrested on a warrant of the magistrates.

In charges of a serious nature, or where there is a possibility of suspension or disqualification or civil proceedings being subsequently taken, he should obtain legal aid.

A right of appeal to Quarter Sessions is given where a fine of more than twenty shillings is imposed, or an order made for suspension or disqualification, provided that a plea of "guilty" has not been made. An application can also be made to the High Court to repeal a conviction upon a point of law, no matter what the penalty.

### ACCIDENTS.

The general rule is that an owner is responsible for any damage caused by the negligence of his driver, provided that it was committed in the course of the service and for the master's benefit.

If he was acting outside the scope of his authority, then the owner cannot be held liable. Neither is the owner liable for injury caused by his servant's own wilful and malicious acts.

The breach of a statutory duty is not always evidence of negligence, although in a good many cases a breach of any of the provisions of the Motor Car Act would be sufficient to lay on the defendant the onus of showing that there was no negligence.

A defendant can escape liability by showing that the plaintiff himself was guilty of some wrongful act or omission amounting to contributory negligence, and that he, the defendant, in the exercise of ordinary care, could not have avoided the accident.

There is, of course, no liability in the case of unavoidable accidents. The fact that the defendant was on the wrong side of the road is only *primâ facie* evidence of negligence. The rule of the road to "keep to the left" is not universal.

Where there is danger in keeping to the left, a vehicle is not bound to keep to the left and incur danger when the road is clear and there is no danger in going to the right.

When an accident occurs owing to the presence of a motor car on the highway, it is most important to obtain the names and addresses of all favourable witnesses, and to take measurements of the wheel tracks and any other particulars which may be used in evidence. A motorist should stop immediately and render all possible help, and give the particulars which he is called upon to supply under the Motor Car Act.

An action for damages is brought in the High Court of Justices, but when the amount is small the County Courts have jurisdiction.

## LAMPS.

Between one hour after sunset and one hour before sunrise, a lamp showing a white light, visible within a reasonable distance in front, must be placed at the extreme right or off side of the car. Either the lamp must exhibit a red light visible in the reverse direction to which the car is proceeding or a lamp showing a red light must be placed at the back of the car.

Every lamp shall be so constructed, fitted, and attached as to prevent the movement or the use as searchlights.

Between one hour after sunset and one hour before sunrise, a lamp shall be kept burning on the car, so contrived as to illuminate by means of reflection, transparency, or otherwise every letter or figure on the identification plate fixed on the back of the car. For motor cycles of a weight not exceeding three hundredweights, the plate fixed on the front may be illuminated instead of the plate fixed on the back.

## Additional Byelaws.

### ADDITIONAL FRONT LAMP.

(1) Byelaws requiring that an additional lamp attached on the left side of all vehicles, and showing a white light to the front, are enforced by the following bodies :—

County Councils of Glamorganshire, Monmouthshire, and Staffordshire; Town Councils of Dudley, Hanley, Merthyr Tydfil, Monmouth, Newcastle-upon-Tyne, and Stafford.

### A RED LIGHT TO THE REAR.

(2) Byelaws requiring that a lamp or lamps showing a red light to the rear shall be carried on all vehicles, are enforced by the following bodies :—

County Councils of West Riding of Yorkshire and Middlesex; City Council of Leeds; Town Councils of Newcastle-upon-Tyne, Reigate, Brighouse, Halifax, Hornsey, Keighley.

## Prohibition of Cut-outs.

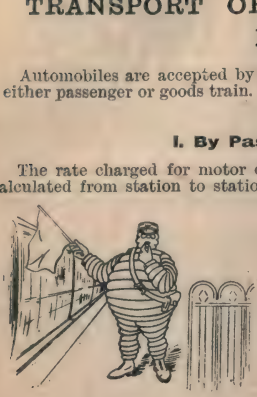
A new Local Government Board Order was issued on the 12th of February, 1912, respecting the prohibition of cut-outs. The Order takes the form of an amendment of Article IV. of the Motor Cars (Use and Construction) Order, 1904, as amended by the Motor Cars (Use and Construction) Amendment Order, 1909, by the addition to that Article of a further regulation prohibiting the use of the "cut-out" or any similar device. The new regulation does not extend to motor cycles.

# TRANSPORT OF MOTOR CARS BY RAIL.

Automobiles are accepted by all Railway Companies for transport by either passenger or goods train.

## I. By Passenger Train.

The rate charged for motor cars by passenger train is 6*d.* per mile, calculated from station to station, the minimum charge being 7*s.* 6*d.*, and the maximum weight per truck 50 cwt.



The Railway Companies accept no responsibility for cars sent at this rate. If it is desired to send cars at Company's risk, an extra charge of 25 per cent. is made ; or insurance can be effected through the Railway Companies, at a premium of 1¼ per cent. of the actual value.

Payment may be made either in advance or on delivery, but in the latter case the car will be deemed to have been carried at Owner's risk, and uninsured, unless an understanding to the contrary was arrived at when arranging for the despatch of the car at the departure station.

Motor cars sent at the above rates are carried on open trucks. If a covered truck is required, an extra charge of 5*s.* is made for distances up to 50 miles, 10*s.* for distances over 50 miles.

As a general rule, 24 hours' notice should be given when it is desired to send a motor car by passenger train, but in case of emergency this period can sometimes be reduced ; for instance, notice might be given early in the morning for a car to be despatched by a train leaving on the evening of the same day.

There are no formalities in this connection beyond giving notice either verbally or in writing at the station from which the car is to be despatched.

Delivery can be had immediately the car is unloaded.

## II. By Goods Train.

The rates for conveyance of motor cars by goods train are given in the table below. This list is subject to alteration without notice at any time.

Cars sent at these rates are conveyed at the Railway Company's risk.

Motor cars are accepted for conveyance by goods train without previous notice, but it is preferable to give notice to enable a suitable truck to be provided. The time in transit of course varies according to the distance covered ; but it may be taken as a general rule that except for very long distances, motor cars arrive at destination the day after despatch.

The rates given are for conveyance on open trucks ; for a closed waggon an extra charge of 10*s.* is made for any distance.

Motor cars for conveyance by goods train are accepted at all goods stations, where facilities are provided for loading. They are not accepted at purely passenger stations for conveyance at goods rates.

Carriage charges can be made payable by either the consignor or the consignee. In the first instance, the charges should be paid when the traffic is tendered ; in the latter, when delivered.

## TABLE OF RATES FOR CARRYING AUTOMOBILES (unpacked) BY GOODS TRAIN (Station to Station).

NOTE.—*In the case of traffic to London the following Mileage rates are applicable only to the Stations of the Company carrying the traffic into London, and not beyond to any other London Station:—*

| 220 | 73 6 | 440 | 132 2 | | |

For the use of a Covered Truck, Passenger or Goods, for the conveyance of any vehicle, an additional charge of 10*s.* is made.

### III. General.

Motor cars for transport by Rail must be handed over to the Company uncharged with electricity, gas, oil, or other inflammable liquid or vapour (except as regards the small electric battery and coil usually fixed in petrol-propelled motor cars).

Motor cars for transport by Rail must be handed over to the Railway Company at the departure station, and taken over by the Consignors at the arrival station, unless a special arrangement as to collection or delivery is come to, for which, in every case, an extra charge varying with the circumstances would be made.

The charge in London for such cartage is 10*s.* per ton, with a minimum charge of 5*s.*, within the prescribed cartage area.

PRIVATE CARRIAGES, MOTOR CARS, ETC. BY PASSENGER TRAIN ONLY.

(*a*) Private Carriages and Motor Cars sent on hire or for repairs, and Carriages and Motor Cars on loan sent to be used in place of other Carriages and Motor Cars under repair . . . . . } are charged full rates on the outward journey, and if returned within three months, half-rates on the return journey at Owner's risk. Full rates at Company's risk.

(*b*) Private Carriages and Motor Cars sent on approval . . . . . .

(*c*) Motor Chassis forwarded from Motor Works to Carriage Builders . . . .

(*d*) Private Carriages, Motor Cars, and such Omnibuses as can be carried by Passenger Train, sent from one workshop to another (both workshops being the property of the same person or firm) are charged 25 per cent. less than the ordinary rates at Owner's risk. Full rates are charged at Company's risk.

(*e*) Old private Carriages taken as part payment for new Carriages

are conveyed from the Owners to the Coachbuilders at half-rates, at Owner's risk, provided they are both sent between the same points within three months. Minimum charge, 3*s*. 9*d*.

This reduction of 25 per cent. is not allowed in respect to carriages which are on the outward journey charged full rates, and half-rates on being returned within three months, *vide* clauses (*a*), (*b*), and (*c*) above.

(*f*) Old Motor Cars exchanged for new Motor Cars carried from the Owners to the Makers, are charged half-rates at Owner's risk, provided they are both sent between the same points within three months. Minimum charge, 3*s*. 9*d*.

(*g*) Private Carriages and Motor Cars sent from manufacturers to their Agents for sale are charged full rates.

A declaration stating that the vehicle is sent under the above-mentioned circumstances must be given by sender in each case.

The minimum charges for vehicles sent under clauses (*a*), (*b*), and (*c*) are 7*s*. 6*d*. for the outward journey, and 3*s*. 9*d*. for the return journey.

Motor Cars, minus the motor portion, are charged as Motor Cars.

Motor Tri-Cars are treated and charged as Motor Cars.

Motor Car Bodies, without wheels, springs and motor portion, are charged as Carriages; not more than three being loaded on one truck.

When covered trucks are used for private Carriages and Motor Cars conveyed under these arrangements, the full covered truck charge is made.

## IV. Motor Cycles and Cycles. (Passenger Service.)

### MOTOR CYCLES, MOTOR CARS, ETC.

Motor Cycles, uncharged with electricity, gas, oil, or other inflammable liquid or vapour (except as regards the small electric battery and coil usually fixed to petrol-propelled Motor Cycles, when conveyed in the guard's van), are charged as under:—

MOTOR BICYCLES.

## TELEPHONES.

The fees for the use of trunk lines are as follows:—

| | |
|---|---|
| For 25 miles or under | 3*d.* |
| ,, 50 ,, ,, | 6*d.* |
| ,, 75 ,, ,, | 9*d.* |
| ,, 100 ,, ,, | 1*s.* |
| ,, every additional 40 miles or fraction thereof | 6*d.* |

Special rates are charged where submarine lines are used.

The usual period of conversation is *three minutes*, but six minutes may be obtained by paying a double fee. No person is entitled to use a trunk line continuously for more than six minutes.

The charge for a six minutes' conversation between 7 p.m. and 7 a.m. is the same as for a conversation of three minutes' duration in the day time. During the same period, for a three minutes' conversation, for which the day charge is 9*d.*, a reduced fee of 6*d.* is charged, and half the usual day charge is made where the ordinary fee is 1*s.* or more.

# AUTOMOBILE AND CYCLE CLUBS.

## ROYAL AUTOMOBILE CLUB,

### Pall Mall, London, S.W.

*Telegrams:* Automobile, London. *Telephone:* Mayfair 5000.
*President:* HIS ROYAL HIGHNESS THE DUKE OF CONNAUGHT, K.G.
*Secretary:* J. W. ORDE, Esq.

The Royal Automobile Club was founded towards the end of the year 1897 under the name of "The Automobile Club of Great Britain." Rooms were taken at 4, Whitehall Court, S.W., but as the membership increased rapidly a migration was made in 1902 to 119, Piccadilly, W. In the early part of 1908 the Club acquired the site of the old War Office in Pall Mall, and here a palatial building has been erected. The Club entered into occupation of its new premises at the beginning of 1911, when the number of members was over 6800.

Its objects are the encouragement and development of the automobile movement; the provision for its members of a social Club, and a centre of information and advice on matters pertaining to automobilism; and the advantage of its support in the protection and defence of their rights.

The entrance fee for all members is at the present time 25 guineas. The subscription for town members is 10 guineas, and for country members 5 guineas.

The Club has agreements with all the chief Automobile Clubs abroad, and it is, therefore, kept in touch with the movement in all parts of the world. In addition, practically all the provincial motoring Clubs and Organisations of the United Kingdom are associated with the Club, which provides special facilities for them. Those unconnected with any motor organisation can secure all the advantages of association for one guinea per annum. Suitable accommodation is provided for the Associates in the new building. The total number of Members and Associates at the end of 1912 was upwards of 35,000.

In 1907 the Club became "The Royal Automobile Club" by command of the late King Edward VII., who also took a great personal interest in the design of the car badge.

The Club has a Paris Office at 54, Faubourg St. Honoré.

The following are the departments: Secretary's Office, House, Technical, Engineers, Accountants, Legal, Driving and Mechanical Proficiency Certificates, Register of Motor Servants, International Travelling Passes, Associates, Road Guides, Touring, Driving Instruction, and Roads.

The Club has formed the following bodies since its inception:—

The Motor Vehicle Users Defence Association.

The Motor Union (The Users Defence Association was merged in the Union).

The Auto-Cycle Club (now the Auto-Cycle Union).

The Motor Van, Wagon, and Omnibus Users Association (now The Commercial Motor Users Association).

The Motor Yacht Club (now the Royal Motor Yacht Club).

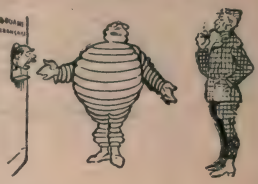
# INTERNATIONAL TOURING.

The English tourist should, before going abroad, obtain the necessary papers which will permit him to circulate freely in the country it is intended to visit. These papers are two in number, namely the Triptych, and the International Travelling Pass.



**1. A Triptych** (Permit for free circulation abroad) should be obtained for each country it is desired to visit, such as France, Germany, Austria, Belgium, Holland, Luxemburg, Switzerland, Italy or Spain.

The triptych is *not obligatory*, but it possesses the following advantages :—

(*a*) It obviates the payment and re-payment of duties on each frontier ; formalities which are very tedious ;

(*b*) It saves the loss caused by purchase of foreign money ;

(*c*) It obviates the necessity of carrying large sums of money.

**To obtain a Triptych.**—The English tourist should apply to the Association of which he is a member. (The Royal Automobile Club, the Automobile Association and Motor Union.) The American tourist should apply to the Automobile Club of France, the Touring Club of France, or to one of the British associations mentioned above. The French clubs do not issue triptychs by correspondence, and applicants must be, at the time of application, staying in France. (It is not necessary to become a member of the Automobile Club of France to obtain a triptych, but the other associations only give them to members.)

Pay careful attention to the importation formalities required by each country. Always give full details of your car ; and although the information required by different countries varies, the following table will be found very useful :

**Information to be given for all countries.**

Name of the person applying for the Triptych.
Address.
Member's Club Number.

**Information regarding the Car.**

(See which particulars are required for each country.)

| | | | |
|---|---|---|---|
| 1 | Whether car, tricycle, etc. | | **Body.** |
| 2 | Whether racing or touring car. | 14 | Type or shape (tonneau, limousine, etc.). |
| 3 | Number of wheels. | 15 | Make and number. |
| 4 | Weight (write in words). | 16 | Colour. |
| | **Chassis.** | 17 | Seating accommodation. |
| 5 | Make. | 18 | Nature and colour of upholstery |
| 6 | Number. | | |
| 7 | Colour. | | |
| | **Engine.** | | |
| 8 | Make. | | |
| 9 | Number. | 19 | Make of tyres. |
| 10 | Steam, petrol or electric. | 20 | Particular marks (monograms, coat of arms). |
| 11 | HP. | | |
| 12 | Number of cylinders. | 21 | Value of the vehicle (write in words). |
| 13 | Diameter of cylinders. | | |

The above information should be given correctly. If the value and weight declared seem under-estimated, the car is liable to confiscation.

Triptychs consist of one counterfoil and two fly-leaves.

**2. The International Travelling Pass** and Plate enables motorists to travel in all countries which have accepted the Agreement of 11th of October, 1909, without it being necessary to pass new examinations in each country.

They are, however, subject to the local regulations governing motor traffic. The passes hold good for twelve months from the date of issue, and must be renewed annually.

The plate must be oval, 30 centimetres wide, 18 centimetres high, and must carry one or two black letters on a white ground. The letters must consist of Roman capitals, and have a minimum height of 10 centimetres; their outline must be 15 millimetres thick.

The car must also carry in some prominent position on the dashboard or body a plate indicating the name of the chassis manufacturer, the works number of the chassis, the power of the engine in HP, and the weight of the car when empty.

The following are the countries which have accepted the agreement together with letters distinguishing each :—

| | | | | | |
|---|---|---|---|---|---|
| Algeria and Tunis . | F | Great Britain . | GB | Portugal . . | P |
| Austria . . . . . | A | Hungary . . . | H | Russia . . . | R |
| Belgium . . . . | B | Italy . . . . . | I | Spain . . . | E |
| Bulgaria . . . . | BG | Monaco . . . . | MC | Sweden . . . | S |
| France . . . . . | F | Montenegro . . | MN | Switzerland . | CH |
| Germany . . . . | D | Netherlands . . | NL | | |

The Regulations require that cars must be examined in order to ascertain that they fulfil the following :—

(1) The machinery must be such as can be trusted to work efficiently, and must be so designed as to prevent, as far as possible, all danger of fire or explosion, as not to frighten by its noise animals, whether ridden or driven, and as not to give rise to any other cause of danger to traffic, or seriously to inconvenience by the emission of smoke or vapour any persons using the road.

(2) The motor car must be provided with the following :—

(*a*) A strong steering apparatus which will allow the car to be turned readily and with certainty.

(*b*) Two brakes, each independent of the other and adequate for its purpose. One at least of the brakes must be capable of acting rapidly and directly upon the wheels or upon the brake drums immovably fixed thereto.

(*c*) A mechanism which is capable of preventing, even on steep gradients, any backward movement, if one of the brakes is not in itself sufficient for the purpose.

Every motor car whose weight unladen exceeds 350 kilos, must be so constructed that the driver can, from his seat, reverse the movement of the car by means of the driving power.

(3) All the driving and steering apparatus must be so arranged that the driver can manipulate it with certainty, and at the same time have a clear view of the road.

(4) Every car must be provided with plates showing the name of the manufacturer of the chassis and the manufacturer's number, the horse-power of the engine, and also the weight of the car unladen.

All drivers must prove their competency by practical examination, and must not be less than 18 years of age. Holders of the Royal Automobile Club driving certificate, should quote number when applying, and need not be re-examined, but must supply two unmounted photographs, head and shoulders measuring about 1¼ ins. by 1¼ ins.

To obtain the International Pass and Plaque, apply to the Royal Automobile Club, Touring Department. Arrangements are being made whereby motorists may have their cars examined, etc., by local clubs associated with the R.A.C.

For motor-cycles the provisions of the agreement are the same, except that the machinery intended to prevent a car running backwards is not required, nor is the reversing gear.

Fees of 7/- each, making 21/- in all, are payable for the Car Examination and Certificate, the Examination of Driver and Certificate including the supply of the special plate and the International Travelling Pass.

**Special Note.**—One of the inconveniences in crossing frontiers when on an automobile tour is the changing of money, and especially at frontiers crossed on Sundays or holidays. For this reason, the system of International Travellers' Cheques is constantly growing in public favour. Desiring that our friends and clients may have the benefit of all up-to-date improvements which relate to comfortable touring, and in order that they may find it easy to deal with most of our Stockists and Agencies throughout the world, we have arranged that our representatives may accept in payment for all goods and tyres of our make, the International Travellers' Cheques of the American Express Company.

In order to obtain these cheques together with a list of our Stockists and Agencies who accept this mode of payment, apply to any of the Offices or Agents of the American Express Company in Europe, or write to their European headquarters at 11, Rue Scribe, Paris.

## REFERENDUM

# TO MOTORIST READERS

## OF THE MICHELIN GUIDE.

From year to year we intend to do our utmost to bring the Guide nearer to perfection and increase its usefulness, not only by adding to it where necessary, but by suppressing any feature which may be found superfluous.

With this end in view, we venture to ask our readers who have used the Guide on their tours to give us the benefit of their experience, either by filling in the attached form as completely as possible and sending it to us, or by writing us a letter respecting any portion of the Guide which they may have occasion to criticise.

The help thus afforded will be greatly appreciated, and in exchange we shall be pleased to forward a copy of the Guide for 1914, post free, to every motorist who has filled in and sent us the form on pages 738 and 739 and that on page 72.

# REFERENDUM.

1. *Do you use the Michelin Guide in preparing your Tours?* .....

.....

2. *Do you appreciate the method of arranging the itineraries from town to town?* .....

.....

3. *Do you prefer the method of giving long main road itineraries, as adopted in some guides, remembering that this necessitates the deletion of information on all roads not comprised in the main road itineraries?*

.....

.....

4. *In going from town to town, do you prefer to use the text, or the maps?* .....

5. *If you prefer the text, do you find the information given in our Guide sufficient?* .....

6. *If you prefer a map, do you use a large scale map, or our map on a scale of 1 : 1,000,000?* .....

7. *Do you use the Telegraphic Code for ordering tyres and accessories?*

.....

8. *Do you consult our advice on the use and care of tyres?* .....

9. *Are the black and white town plans sufficiently clear?* .....

10. *Are the smaller town plans sufficient?* .....

11. *Do you consult the General Information section?* .....

12. *Do you use the Excursions, and, if so, have you found the directions given sufficiently clear?* .....

.....

13. *Is the Railway information quite clear?* .....

14. *Is the Information respecting Ferries quite clear?* .....

15. *Which section of the Guide do you refer to most frequently, and which do you find most useful?* .....

.....

.....

16. *Are there some parts of the Michelin Guide which you do not use, and which you think might be deleted with advantage?*

17. *Do you think the information given should be more complete? If so, in what respect?*

18. *More particularly, do you consider it necessary to add further indications for travelling in open country?*

19. *If it should become necessary to supplement the information given in the Guide, would you prefer a thicker or a larger-sized book, or would you rather have the Guide in two separate volumes?*

20. *In the latter case, what division would you suggest?*

21. *General Opinion.—New propositions:*

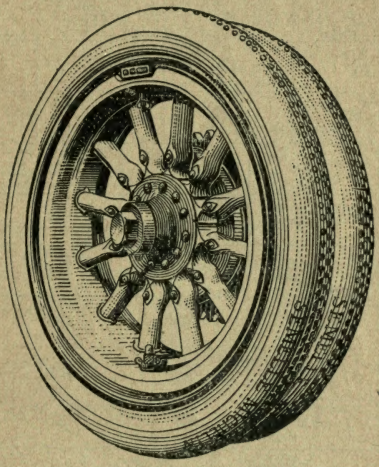
# Michelin Twin Tyre



The rapidly-growing popularity of our Twin Tyre among commercial vehicle and heavy car owners, by reason of the great saving effected, is the truest indication of its very practical value.

As a well-illustrated, informative manual of the whole subject, the booklet "Michelin Twin Tyres" is worth careful perusal.

Copies free on application.

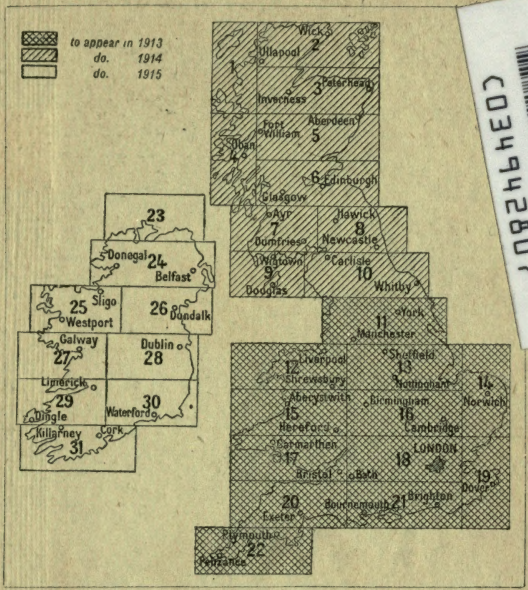
NOTE.—All the sheets shown on the Key Map above are on sale, with the exception of Nos. 34, 35, and 39 to be published in April; 7, 42, and 43 in May, and 46 and 47 in June.

# Michelin Map of the British Isles.

**(Scale 1 : 200,000 or 3·15 Miles to the Inch).**

**Published in 31 Sheets.**



The first six sheets, Nos. 17, 18, 19, 20, 21 and 22 will be published in August, 1913, the remaining sheets appearing in order from South to North.

The map will be engraved, and printed in four colours. Some special advantages of the map will be its indication of road surface, gradients, picturesque roads, beauty spots, dangerous corners, railways, level-crossings, roads to be avoided, golf links, race-courses, and all places of interest to the tourist. Blue figures indicate short intermediate distances on all roads, whilst the longer distances between large towns are shown in red. It is specially designed for use with the Michelin Guide; and will be so folded that any portion of the map can be readily consulted without its being entirely unfolded.

The map will be published by Messrs. W. Clowes & Sons of London and Beccles, and will be on sale at all stationers and booksellers, at our stockists' premises, at our Touring Office, 81, Fulham Road, S.W., and at the Royal Automobile Club.
